WORKBOOK OF ANALYTICAL SKILLS-1

PEA-305

Department of Analytical Skills
Centre for Professional Enhancement

PREFACE

Companies that hire students through campus placements have various rounds to shortlist suitable candidates; these rounds include aptitude tests, group discussions and then personal interview. Most, if not all the companies follow this recruitment pattern.

Almost 90% of the applied candidates don't clear the aptitude test. The aptitude test is used to test the candidate on Quantitative Aptitude, Verbal Ability, and Analytical Ability/Logical Reasoning.

Quantitative Aptitude and Reasoning is very important subject to test your problem-solving skills. So, in every competitive written exam they asked questions from this subject, not only in written they may ask some brain storming puzzles in interview also. It is the one of the key concepts to qualify written exam almost every student who know basic mathematics can solve most of the questions in the exam but the main problem is that the time management, the recruiters does not give enough time to solve the problems so one who has more practice the model questions before exam can easily solve in the exams.

This book is essential for aptitude exams as all the important topics are discussed in this book. This book explains all the concepts clearly and also covers all the types of the questions.

Table of Content

Unit Number	Topic	Page No.
	Number System	5-15
1	Average	16-22
	Simplification and Approximation	23-25
	Percentage	26-36
2	Profit and Loss	37-45
	Simple Interest and Compound Interest	46-52
3	Logical Reasoning	53-66
4	Ratio and Proportion	67-79
4	Alligation and Mixture	80-86
5	Permutation and Combination	87-92
5	Probability	93-101
6	Analytical reasoning	102-112
	Answer Key	113-116

NUMBER SYSTEM

1. The numbers 1, 2, 3, 4, 5.....are called natural numbers or positive numbers.

Example: 1, 2, 3, 4, 5.....

2. **Whole Numbers:** –The numbers including "0" and all natural numbers are called the while numbers.

Example: 0, 1, 2, 3, 4, 5.....

3. **Integers –** The numbers including 0 and all the positive and negative of the natural numbers are called integers.

Example:-3, -2, -1, 0, 1, 2, 3.....

4. **Rational Numbers:** – A number which can be expressed in the form p/q where p and q are integers and $q \neq 0$ is called a rational number.

For example, 4 is a rational number since 4 can be written as 4/1 where 4 and 1 are integers and the denominator $1 \neq 0$. Similarly, the numbers $\frac{3}{4}$, -2/5, etc. are also rational numbers.

Between any two numbers, there can be infinite number of other rational numbers.

5. **Irrational Numbers:** – Numbers which are not rational but which can be represented by points on the number line are called irrational numbers. Examples for irrational numbers are

Example: $\sqrt{2}$, $\sqrt{3}$, $\sqrt{5}$, $\sqrt{8}$, etc.

Numbers like π , e are also irrational numbers.

Between any two numbers, there are infinite numbers of irrational numbers.

Another way of looking at rational and irrational numbers is

Any terminating or recurring decimal is a rational number.

Any non-terminating non-recurring decimal is an irrational number.

- 6. **Real numbers:** The set of natural numbers, integers, whole numbers, rational numbers, and irrational numbers constitute the set of real numbers.
- 7. **Even Numbers:** The numbers that are divisible by 2 are called even numbers.

Example: 2, 4, 6, 8, 16, 32 etc.

- 8. **Odd Numbers:** The numbers that are not divisible by 2 are called odd numbers.
 - a. Example: 3, 5, 7, 9, 15 etc.
- 9. **Prime Numbers:** Those numbers which are divisible by themselves and 1 are called prime numbers or a number which has only two factors 1 and itself is called a prime number.
 - b. Example: 2, 3, 5, 7 etc.
- 10. **Twin Primes:** A pair of prime numbers when they differ by 2 are called twin prime numbers.
 - c. Example: (3, 5), (5, 7), (11, 13), (17, 19) etc.
- 11. **Co-prime Numbers:** A pair of two natural numbers are said to be co-prime if their G.C.D. or H.C.F. is 1.
 - d. Example: H.C.F. (3, 4) = 1, H.C.F. (13, 15) = 1 then (3, 4) and (13, 15) are co-prime numbers.

12. **Composite Numbers:** – The natural numbers which are not prime are called composite numbers OR numbers that have factors other than itself and 1, are called composite numbers.

Example: 4, 6, 9, 16, 25 etc.

Note: 1 is neither a composite number nor a prime number.

13. **Perfect Numbers:** – If the addition of all the factors of a number excluding the number itself happens to be equal to the number, it is called a perfect number.

First perfect number is 6.

Factors of 6 are 1, 2, 3, 6.

Now add all the factors excluding 6.

1+2+3 = 6, hence 6 is a perfect number.

Example: 28, 496 and 8128.

14. **Complex Numbers:** – The number which have real and imaginary component is called a complex number.

Example: 3+4i, 5+6i, where $i = \sqrt{-1} = a$ imaginary number

15. Face Value of a digit in a number is its own value.

Example: 6728, Face Value \Rightarrow 6 = 6, 7 = 7, 2 = 2 and 8 = 8

16. Place Value of a digit is given by multiplying it with value of place where it is placed.

Example: 6729

Place Value of $9 \Rightarrow 9 \times 1 = 9$

Place Value of $2 \Rightarrow 2 \times 10 = 20$

Place Value of $7 \Rightarrow 7 \times 100 = 700$

Divisibility Rules

Divisibility by	Criteria
2	A number is divisible by 2 when its units place is 0 or divisible by 2. Example: 130, 128 etc.
3	A number is divisible by 3 when the sum of its digits is divisible by 3. Example: $6561 \Rightarrow 6+5+6+1 = 18$ is divisible by 3 $17281 \Rightarrow 1+7+2+8+1 = 19$ is not divisible by 3
4	When the last two digits of the number are 0's or divisible by 4. Example: 17400, 132, 12348 etc.
5	If the unit digit is 5 or 0, the number is divisible by 5. Example: 895, 100, 125, 625, 400 etc.
6	A number is divisible by 6, if it is divisible by both 2 and 3.

	<u> </u>
7	A number is divisible by 7, if and only if the number of tens added to 5 times the number of units, is divisible by 7
	Example: 105 is divisible by 7, since 10+5*5= 10+25=35, which is divisible by 7.
8	If the last three digits of the number are 0's or divisible by 8, the number is divisible by 8.
	Example: 125128, 135000 etc.
	If sum of digits is divisible by 9, the number is also divisible by 9.
9	Example: $729 \Rightarrow 7+2+9 = 18$ is divisible by 9.
	$46377 \Rightarrow 4+6+3+7+7 = 27$ is divisible by 9.
40	A number is divisible by 10 if and only if the unit place digit is 0.
10	Example: 100, 23450, 1100 etc.
11	When difference between sum of digits at odd places and sum of digits at even places is either 0 or 11, the number is divisible by 11.
	Example: $65967 \Rightarrow (6+9+7) - (5+6) = 22 - 11 = 11$ is divisible by 11.
	Add 4 times the last digit to the remaining truncated number. Repeat the step as necessary. If the result is divisible by 13, the original number is also divisible by 13.
13	For example: 3146
	314+ (46) = 338 :: 33+(48) = 65. Since 65 is divisible by 13, the original no. 3146 is also divisible
	Subtract 5 times the last digit from remaining truncated number. Repeat the step as necessary. If the result is divisible by 17, the original number is also divisible by 17
17	For example : 2278
	227-(5*8)=187. Since 187 is divisible by 17, the original number 2278 is also divisible.
10	Add 2 times the last digit to the remaining truncated number. Repeat the step as necessary. If the result is divisible by 19, the original number is also divisible by 19
19	For example : 11343
	1134+(23)= 1140. (Ignore the 0):: 11+(24) = 19. Since 19 is divisible by 19, original no. 11343 is also divisible

LCM and HCF

Important Terms:

- 1) Factors: Factor is a number which exactly divides other number.
- 2) **Multiple:** A number is said to be multiple of another number, when it is exactly divisible by other number.

- 3) **Common multiple:** A common multiple of two or more numbers is a number which is exactly divisible by each of them.
- 4) **Highest Common Factor (HCF) or Greatest Common Factor (GCF)**: HCF of two or more numbers is the greatest number which divides each number exactly.
- 5) **Lowest Common Multiple (LCM)**: The least number exactly divisible by each one of the given numbers is called least common multiple.

Tips and Tricks:

1) H.C.F. and L.C.M. of Fractions

H.C.F. =
$$\frac{\text{H.C.F. of Numerator}}{\text{L.C.M. of Denominator}}$$

2) Product of two numbers = Product of their H.C.F. and L.C.M.

This condition is only true for two given numbers. If H.C.F. and L.C.M. of three or more numbers are given, then this rule is not applicable.

Method to Find H.C.F. of Given Numbers

Prime Factorization Method

Steps to follow:

- 1) Express the given numbers as product of their prime factors.
- 2) Check for common prime factors and find least index of each common prime factor
- The product of all common prime factors with the respective least indices is H.C.F of given numbers.

Example: H.C.F. of 12, 36, 48
Prime Factors of 12, 36, 48

$$12 = 2 \times 3 \times 2 = 3 \times 2^{2}$$

 $36 = 2 \times 2 \times 3 \times 3 = 2 \times 3$
 $48 = 2 \times 2 \times 2 \times 2 \times 3 = 2^{4} \times 3$

2 & 3 are common factors. 2 & 3 have least indices.

H.C.F. of 12, 36,48 = Product of common prime factors with least indices.

H.C.F. of 12, 36,48 =
$${2 \choose 2} \times 3 = 12$$

H.C.F. of 12, 36,48 = 12

Division Method

Steps to follow:

- 1) Draw a table as shown and arrange the given numbers horizontally.
- 2) Divide the numbers with their common factors.
- 3) Divide till the given numbers have no common factors.
- 4) Finally multiply the common factors on left hand side of the table to find the H.C.F.

Example: H.C.F. of 12, 36, 48

12	36	48
6	18	24
3	9	12
1	3	4
	6	6 18 3 9

H.C.F or G.C.F = $2 \times 2 \times 3 = 12$ H.C.F of 12, 36, 48 = 12

FACTORS OF A NUMBER

Given an integer N, there is a simple way to find the total number of its factors. The main tool for the feat is the **prime number decomposition theorem.**

These are certain basic formulas pertaining to factors of a number N, such that,

$N = p^a \times q^b \times r^c$

Where, p, q and r are the prime factors of the number N. a, b and c are non-negative powers/ exponents.

- 1. Number of factors of N = (a+1)(b+1)(c+1)
- 2. Number of odd factors of N =product of only odd numbers power increased by 1.
- 3. Number of even factors of N = Total factors odd factors
- 4. Number of prime factors of N = addition of powers=a+b+c.
- 5. Product of factors of N = N No. of factors/2
- 6. Sum of factors of N = $(p^0+p^1+...+p^a)$ $(q^0+q^1+....+q^b)$ $(r^0+r^1+...+r^c)$

Example- Consider the number 120. Find the following for n:

- Sum of factors.
- 2. Number of factors.
- Product of factors.

- 4. Odd factors.
- 5. Even factors.
- 6. Prime factors.

Solution- The prime factorization of 120 is $2^3 \times 3^1 \times 5^1$. By applying the formulae,

- 1. **Sum of factors** = [(20+21+22+23)(30+31)(50+51)]= 1560
- 2. Number of factors = (3+1)(1+1)(1+1) = 16
- 3. **Product of factors** = 120(16/2) = 12084.
- 4. Odd factors = $(1+1)^*(1+1) = 4$
- 5. Even factors =16-4=12
- 6. **Prime Factors** = 3+1+1=5

FACTORIALS

The factorial function (symbol "!") means to multiply a series of descending natural numbers.

An older notation for the factorial is n

 $N! = N(N-1) (N-2) \dots 1.$

4! =4*3*2*1=24

Note- 0! = 1 and 1! = 1.

Trailing zeros or ending zeros in N!

For example, 5! =120. So, it has only one zero in end.

Rule for finding trailing zeros- Divide the given number by the powers of 5 till it divisible by powers of 5. It means numerator is greater or equal to denominator.

$$N/5 + N/5^2 + N/5^3 \dots N>= 5^n$$

Here we take only quotient of it.

Example- Find the trailing zeros in 102!

102/5 + 102/25 = 20+4=24 (Here 100/125 is not possible, so divide by 5's powers till it is less or equal to number) So, 102! Have 24 zeros.

Highest power of a number in a factorial or in a product

Highest power of p (prime number) in N! is $[N/p] + [N/p^2] + [N/p^3] + \dots [N/p^n]$ till N>=pⁿ. Take only quotient of these divisions.

Example 1- Highest power of 2 in 50!?

50/2 +50/4 +50/8+50/16 +50/32

= 25+12+6+3+1 = 47

Example 2- Highest power of 6 in 20!?

6 is a composite number. To find the highest power of composite number write it into prime factorization, i.e., 6=2x3. Now, find the highest power of 2 and 3 in 20!.

Highest power of 2 is= 20/2+20/4+20/8+20/16

=10+5+2+1=18

Highest power of 3 is = 20/3 + 20/9 = 6+2 = 8

Highest power of 6 is the least value which of individual highest powers. Here values are 18 and 8. So, thehighest power of 6 is 8.

<u>REMAINDER</u>

Remainder Theorem:- Dividend =Divisor x Quotient + Remainder When dividend is of the form $a^n + b^n$ or $a^n - b^n$:

Theorem 1: $a^n + b^n$ is divisible by a + b when n is **ODD**.

Theorem 2: $a^n - b^n$ is divisible by a + b when n is **EVEN**.

Theorem 3: an - bn is ALWAYS divisible by a - b.

When $f(x) = a + bx + cx^2 + dx^3 + ...$ is divided by x - a

The remainder when $f(x) = a + bx + cx^2 + dx^3 + ...$ is divided by x - a is f(a). So, If f(a) = 0, (x - a) is a factor of f(x).

Example:- What is the remainder when the product $1998 \times 1999 \times 2000$ is divided by 7? Find the individual remainders of 1998, 1999, and 2000 are divided by 7 are 3, 4, and 5 respectively. Hence, the final remainder is the remainder when the product $3 \times 4 \times 5 = 60$ is divided by 7.So, the final remainder is 4.

Fermat's theorem-

This theorem is stated in the following form: if p is a prime and a is an integer co-prime to p, then $a^{(p-1)} - 1$ will be evenly divisible by p. In other words, $[a^{(p-1)}]/p$ gives remainder 1.

Example:- Find the remainder when 72⁴⁰ divide by 41?

Answer: So here we see that 41 is a prime number, so we will target Fermat's little theorem instead of Euler's theorem.

Again 72 and 41 are co-prime. so we can apply our little theorem in this problem easily.

-> remainder [72 $^40/41$] = 1.

Wilson's Theorem-

This theorem state that for a prime number p, (p-1)! Divide by p, then the remainder is p-1.

Example:- Find the remainder when 16! is divided by 17.16! = (16! + 1) - 1 = (16! + 1) + 16 - 17 Every term except 16 is divisible by 17 in the above expression.

Hence the remainder = the remainder obtained when 16 is divided by 17 = Rem (16).

UNIT DIGIT

Unit digit of product- Multiply last digits of each number.

Example: 121x76x528x172= 1x6x8x2=96= 6 is unit digit here.

Unit digit of powers- Either use cyclicity of number or use simple method.

2	3	4	5	6	7	8	9
21=2	31=3	4 ¹ =4	5 ¹ =5	6 ¹ =6	7 ¹ =7	8 ¹ =8	9 ¹ =9
2 ² =4	3 ² =9	4 ² =6	5 ² =5	6 ² =6	7 ² =9	8 ² =4	9 ² =1
2 ³ =8	3 ³ =7	4 ³ =4	5 ³ =5	6 ³ =6	7 ³ =3	83=2	9 ³ =9
2 ⁴ =6	3 ⁴ =1	4 ⁴ =6	5 ⁴ =5	64=6	7 ⁴ =1	84=6	94=1
25=2	35=3	4 ⁵ =4	5 ⁵ =5	6 ⁵ =6	7 ⁵ =7	85=8	9 ⁵ =9
2 ⁶ =4	3 ⁶ =9	4 ⁶ =6	5 ⁶ =5	6 ⁶ =6	7 ⁶ =9	86=4	9 ⁶ =1
2 ⁷ =8	3 ⁷ =7	4 ⁷ =4	5 ⁷ =5	6 ⁷ =6	7 ⁷ =3	8 ⁷ =8	9 ⁷ =9

Example:- Find the unit digit in 2⁴⁹?

We know in case of 2, it repeats itself after a cycle of 4. We will divide 49 by 449/4 remainder is 1 We write it as $2^49 = 2^1 = 2$. That means the unit digit in the 2^49 is 2.

Rule for numbers ending in digits 0 or 1 or 5 or 6:-

Unit digits of that numbers are same as there last digits ending in 0 or 1 or 5 or 6 whatever the power is. **Eg.-** (235)^27= unit digit 5 (126)^344= unit digit 6

Rule for numbers ending in digits 2,3,4,7,8 and 9:-

Divide the power by 4 find the remainder. Make that remainder to the power of last digit of the number will give us the unit digit.

Note- if remainder is 0 (power completely divisible by 4) take remainder as 4 not 0.

	l e.1- (327)^2222/4 =l it is 7. Make remaind	Rem(2) der 2 to power of 7=7^2	2=49So , 9 is a unit diç	jit.
36/4=R	l e.2- (28)^36 em(0). Here take rem it is 8. Then, 8^4 = 6	nainder as 4. 4 x 64 = 4 x 4 = 16.So	, unit digit is 6.

The unit digit of 12³⁴-5⁹ is? (c) 9 (d) None of these (a) -1 (b) 1 23. Find the unit digit of given product (2³⁴ x14⁸³² x 17²¹)? (b) 8 (c) 2 (d) 7 (a) 6

Factors & Factorials

- 24. Find the number of trailing zeroes in the expansion of 1000!?
 - (a) 250 (b) 300(c) 249(d) 245
- 25. Find the number of zeros in 2*3*4*5 *125?
 - (a) 30(b) 35 (c) 38 (d) 31
- 26. Find the highest power of 24 in 150!?
 - (a) 48(b) 72 (c) 58 (d) 45
- 27. Find the highest power of 30 in 40!?
 - (a) 12 (b) 10 (c) 8 (d) 9
- 28. pqr is a three digit natural number such that pqr=p!+q!+r!. What is the value of (q+r)*p?
 - (a) 1296 (b) 3125 (c) 19683 (d) 9

AVERAGE

The result obtained by adding several quantities together and then dividing this total by the number of quantities is called Average.

Average= Sum of quantities / Number of Quantities

An average is the mean value of a set of numbers or values. It is given by:-

Average= (x1+x2+x3+... +xn)/n

Example: If the ages of 4 students are 20 years, 22 years, 18 years and 24 years, then what is the average age of the students?

Solution: Average Age = (20+22+18+24)/4

Important Points to Remember

- 1. If all the numbers are increased by 'a' then their average is also increased by 'a'.
- 2. If all the numbers are decreased by 'a' then their average is also decreased by 'a'.
- 3. If all the numbers are multiplied by 'a' then their average is also multiplied by 'a'.
- 4. If all the numbers are divided by 'a' then their average is also divided by 'a'.

Age and Average

- 1. If the average age of n persons decreases by x years. Then, the total age of n persons decreases by (n^*x) yr
- 2. If the average age of n persons increases by x years. Then, the total age of n persons increases by (n^*x) yr

Example: The average age of 6 persons is increased by 2 years when one of them, whose age is 26 years is replaced by a new man. What is the age of the new person?

Solution: Total age increased=6*2=12 yearAge of new persons= (26+12) =38 year The increase in the total age of 6 persons is due to the replacement of a person aged 26 year with a person who is 12 years older to him.

Average of Some Important Series of Numbers

The average of odd numbers from 1 to n,

= (Last odd number +1)/2(n=Last odd number)

The average of even numbers from 2 to n,

= (Last even number +2)/2(n=Last even number)

Important Points

- Average of first 'n' natural numbers = (n+1)/2
- 2. The average of first 'n' consecutive even numbers = (n+1)
- 3. The average of first 'n' consecutive odd numbers = n
- 4. The average of consecutive numbers = (First Number+ Last Number)/2
- 5. The average of 1 to 'n' odd numbers = (Last Odd Number+1)/2
- 6. The average of 1 to 'n' even numbers = (Last Even Number+2)/2
- 7. The average of square of natural numbers till n = [(n+1)(2n+1)]/6
- 8. The average of cubes of natural numbers till $n = [n(n+1)^2]/4$
- 9. Correct Sum = Wrong Sum-Wrong Value+ Right Value
- 10. The average of squares of 1st n consecutive even no's = [2(n+1)(2n+1)]/3
- 11. The average of squares of consecutive even no's from 1 to n = [(n+1) (n+2)]/3
- 12. The average of squares of consecutive odd no's from 1 to n = [n (n+2)]/3
- 13.If the average of n1 observation is a1 and n2 observation is a2.Then, the average of all the observations is:-

```
A= <u>n1a1+n2a2+n3a3+.....</u>
n1+n2+n3+.....
```

14. If the average of 'm' observations is 'a 'and average of 'n' observations taken out of 'm' is 'b'. Then, Average of rest of the observations= (ma-nb)/(m-n)

Average Speed

1. Average Speed=Total Distance/ Total Time

Let the distance between two points A and B is d and speed in travelling from point A to B is x km/hr and from point B to A is y km/hr.

Then, average speed= (2xy) / (x+y)

Example: If a person travels two equal distances at 10 km/hr. and 30 km/hr. What is the average speed for the entire journey?

Solution: Average Speed =2xy / (x+y)

- = (2*30*10)/30+10
- = 600 / 40 = 15 km/hr.

- If a person covers three equal distances at a speed of A km/hr, B Km/hr and C Km/hr. Then, the average speedfor the whole journey will be = 3 ABC/ (AB+BC+CA)
- **3.** If a person covers 'P' part of his total distance with a speed of 'x', 'Q' part of his total distance with a speed of 'y', 'R' part of his total distance with a speed of 'z'. Then

Average = ____xyz

	Competitive level
1.	The average salary of all the employees in a small organization is Rs 8,000. The average salary of 7 technicians is Rs 12,000 and the average salary of the rest is Rs 6,000. The total number of employees in the organisation is ?
0	a) 21 b) 22 c)23 d) 24
2.	Without any stoppage, a person travels a certain distance at an average speed of 42 km/h, and with stoppages he covers the same distance at an average speed of 28 km/h. How many minutes per hour does he stop?
^	a) 14 min b)15min c)28min d)None of these
3.	The average marks of Suresh in 10 papers are 80. If the highest and the lowest scores are not considered, the average is 81. If his highest score is 92, find the lowest score. a) 55 b)60 c)62 d) Cant be determined
4.	Three maths classes: X, Y and Z take an algebra test. The average score of class X is 83. The
	average score of class Y is 76. The average score of class Z is 85. The average score of class X and Y is 79 and average score of class Y and Z is 81. What is the average score of classes X, Y, Z
	a) 81.5 b)80.5 c)83 d)78
5.	The average of 17 numbers is 10.9. If the average of first nine numbers is 10.5 and that of the last nine numbers is 11.4, the middle number is
6	a) 11.8 b)11.4 c)10.9 d)11.7 Suraj has a certain average of runs for 12 innings. In the 13th innings he scores 96 runs thereby
0.	increasing his average by 5 runs. What is his average after the 13th innings? a) 48 b)64 c)36 d)72
7.	A batsman in his 17th innings makes a score of 85, and thereby increases his average by 3. What is his average after the 17th innings? He had never been 'not out'.
8	a) 47 b)37 c)39 d)43 The sum of three numbers is 98. If the ratio between first and second be 2 : 3 and that between
0.	second and third be 5:8, then the second number is? a) 30 b)20 c)58 d)48
9.	The average weight of 8 sailors in a boat is increased by 1 kg if one of them weighing 56 kg is
	replaced by a new sailor. The weight of the new sailor is?
10.	a) 57 kg b)60 kg c)64 kg d)62 kg A number X equals 80% of the average of 5, 7, 14 and a number Y. If the average of X and Y is 26, the value of Y is?
	a) 13 b)26 c)39 d)None of these
11.	The average age of P, Q, R, S five years ago was 45 years. By including T, the present average age of all the five is 49 years. The present age of T is?
12.	a) 64 years b)48 years c)45 years d)40 years At Chennai it rained as much on Tuesday as on all the others days of the week combined. If the
	average rainfall for the whole week was 3 cm. How much did it rain on Tuesday?
13	a) 2.625 cm b)3 cm c)10.5 cm d)15 cm. The average monthly expenditure of a family for the first four months is Rs 2,750, for the next three
	months is Rs 2,940 and for the last five months Rs 3,130. If the family saves Rs 5,330 during the whole year, find the average monthly income of the family during the year.
	A) Rs 3,800 b)Rs 3,500 c)Rs 3,400 d)Rs 4,200

14. The average age of 8 men is increased by 2 years. When two of them, whose ages are 20 years
and 24 years respectively are replaced by two women. What is the average age of these women?
a) 36 years b)30 years c)40 years d)42 years
15. The average of 50 numbers is 38. If two numbers 45 and 55 are discarded, the average of the
remaining set of numbers is
16. The average speed of a train running at a speed of 30 km/hr during the first 100 kilometres, at 40
km/hr during the second 100 kilometres and at 50 km/hr during the last 100 kilometres is nearly?
a) 38.5 km/hr b)38.3 km/hr c)40.0 km/hr d)39.2 km/hr
17. The average of 6 observations is 12. A new observation is included and the new average is
decreased by 1. The seventh observation is?
a) 1 b)3 c)5 d)6
18. The average age of 20 men in the class is 15.6 years. Five new men join and the new average
becomes 15.56 years. What was the average age of five new men?
a) 15.5 b)15.4 c)15.25 d)15.3
19. The average weight of 3 men A, B and C is 84 kg. Another man D joins the group and the average
now becomes 80 kg. If another man E, whose weight is 3 kg more than that of D, replaces A, then
average weight of B, C, D and E becomes 79 kg. The weight of A is?
a) 70 kg b)72 kg c)75 kg d)80 kg
20. There was one mess for 30 boarders in a certain hostel. The number of boarders being increased
by 10, the expenses of the mess were increased by Rs 40 per month while the average expenditure
per head diminished by Rs 2. Find the original monthly expenses.
A) Rs 390 b)Rs 410 c)Rs 360 d)Cannot be determined
A) 113 000 b)113 410 c)113 500 d)Odililot be determined

Simplification

1. 'BODMAS' Rule:

This rule depicts the correct sequence in which the operations are to be executed, so as to find out the value of

given expression.

Easy and simple way to remember BODMAS rule!!

B → Brackets first (parentheses)

 $O \rightarrow Of$ (orders i.e. Powers and Square Roots, Cube Roots, etc.)

DM → Division and Multiplication (start from left to right)

AS → Addition and Subtraction (start from left to right)

Thus, in simplifying an expression, first of all the brackets must be removed, strictly in the order (), {} and ||.

After removing the brackets, we must use the following operations strictly in the order:

(i) of (ii) Division (iii) Multiplication (iv) Addition (v) Subtraction.

Note:

- (i) Start Divide/Multiply from left side to right side since they perform equally.
- (ii) Start Add/Subtract from left side to right side since they perform equally.

2. Virnaculum (or Bar):

When an expression contains Virnaculum, before applying the 'BODMAS' rule, we simplify the expression under

the Virnaculum.

3. Modulus of a Real Number:

Modulus of a real number a is defined as

|a| = a, if a > 0 or -a, if a < 0.

Thus, |5| = 5 and |-5| = -(-5) = 5.

PERCENTAGE

PERCENT

When we say "Percent" we mean "per 100"

One percent (1%) means 1 per 100.

50% means 50 per 100 (50% of this box is green)

25% means 25 per 100 (25% of this box is green)

Remember: x% of y = y% of x=xy/100

Example: Find 8% of 50.

8% of 50 is the same as **50% of 8**

And 50% of 8 is 4 So, 8% of 50 is **4**

<u>Decimals, Fractions & Percentages are just different ways of showing the same value:</u>

A Half can be written as:

Common Fractions with Decimal and Percent Equivalents

Here is a table of commonly used values shown in Percent, Decimal and Fraction form:

Fraction	Decimal	Percent
1/2	0.5	50%
1/3	0.333	33.333%
2/3	0.666	66.666%
1/4	0.25	25%
3/4	0.75	75%
1/5	0.2	20%
2/5	0.4	40%
3/5	0.6	60%
4/5	0.8	80%
1/6	0.1666	16.666%
5/6	0.8333	83.333%
1/8	0.125	12.50%
3/8	0.375	37.50%
5/8	0.625	62.50%
7/8	0.875	87.50%
1/9	0.111	11.111%
2/9	0.222	22.222%
4/9	0.444	44.444%
5/9	0.555	55.555%
7/9	0.777	77.777%
8/9	0.888	88.888%
1/10	0.1	10%
1/12	0.08333	8.333%
1/16	0.0625	6.25%
1/32	0.03125	3.13%

LET'S PRACTICE THE CONVERSIONS NOW -

A. FROM PERCENT TO DECIMAL:

To <u>convert from percent to decimal</u>: divide by 100, and remove the "%" sign.

The easiest way to divide by 100 is to move the decimal point 2 places to the left:

From Percent		To Decimal	
75%	0.7.5. 2 Places	0.75	move the decimal point 2 places to the left , and remove the "%" sign.

B. FROM DECIMAL TO PERCENT:

To convert from decimal to percent : multiply by 100, and add a "%" sign.

The easiest way to multiply by 100 is to **move the decimal point 2 places to the right**:

From Decimal		To Percent	
0.125	0.1.2 2 Place	5 12.5% es	move the decimal point 2 places to the right, and add the "%" sign.

Or you can simply multiply 0.125 with 100 and add the % sign to get 12.5%.

c. FROM FRACTION TO DECIMAL:

The easiest way to convert a fraction to a decimal is to divide the top number by the bottom number (divide

the numerator by the denominator in mathematical language)

Example: Convert $^2/_5$ to a decimal.

Divide 2 by 5: $2 \div 5 = 0.4$ Answer: $\frac{2}{5} = 0.4$

D. FROM DECIMAL TO FRACTION:

To <u>convert a decimal to a fraction</u>, remove the decimal by adding the denominator with appropriate number of zeroes and then simplify the fraction.

E. FROM FRACTION TO PERCENTAGE:

The easiest way to convert a fraction to a percentage

form and add the "%" sign.

is to multiply the fraction by 100 and reduce it to decimal

Example: Convert ³/₈ to a percentage

Multiply 3/8 by 100: 37.5 Add the "%" sign: 37.5% Answer: $^{3}/_{8}$ = 37.5%

F. FROM PERCENTAGE TO FRACTION:

To convert a percentage to a fraction steps for , first convert to a decimal (divide by 100), then use the

converting decimal to fractions (like above).

ATTENTION PLEASE!!!

REMEMBER THAT THE BASE TAKEN IS ALWAYS THE ORIGINAL QUANTITY!!!

Class Practice Problems

Type 1 – Basic Questions

1. A person who spe	ends 66 2/3% of his	income is able to	save Rs. 1,200 per month. His mo	nthly
expense is?				
A. 1,200	B. 2,400	C. 3,000	D. 3,200	
2. If 80% of $A = 50\%$	% of B and B = $X\%$ of	of A, then the value	e of X is?	
A. 400	B. 300	C. 160	D. 150	
3. If x is 80% of y, w	hat percent of x is y	<i>i</i> ?		
A. 75%	B. 80%	C. 100%	D. 125%	
4. If 50% of $(x-y) = 3$	30% of (x+y) then w	hat percent of x is	y?	
A. 33%	B. 30%	C. 25%	D. 23%	
5. A is twice B and I	3 is 200% more thai	n C. By what perce	ent is A more than C?	
A. 50%	B. 30%	0.00070		
6. Arun got 30% of the	he maximum marks	in an examination	and failed by 10 marks. However,	
•		•	ne total marks and got 15 marks	
more than the p	passing marks. Wha		g marks in the examination?	
A. 90	B. 250	C. 75	D. 85	
7. P is six times as I	arge as Q. The per	cent that Q is less	than P is?	
A. 83 1/3%	B. 16 2/3%	C. 90%	D. 60%	
8. Dipin's score is 15	5% more than that of	f Rafi. Rafi's score	is 10% less than that of Chandar.	
If the difference	ebetween the score	s of Dipin and Ch	andar is 14, what is the score of	
Rafi?				
A. 180	B. 360	C. 120	D. 480	

9. A student multiplied a number by 3/5 in calculation?	nstead of 5/3. What	is the percentage error in the
	C. 54%	D. 64%
10. Ritesh and Co. generated revenue of Rs		
revenue. In 2007, the gross revenue		
increase in the revenue in 2007?		
A. 12.5% B. 20%	C. 25%	D. 50%
<u>Type 2 – Successive Changes</u>		
11. If the price of article is decreased by 10% of the item is?	%, then increased by	10%, the net effect on the price
	C. 0%	D. 1.5%
12 A person salary is decreased by steps percentage decrease, if the salary is dec		
	B. 38.8%	C. 39% D. 40%
13. The price of a shirt is increased by 15% a is?	and then reduced by	15%. The final price of the shirt
A. 1.25% increases B. 1.25% decreases		
14. A's salary increased by 12% over last year		
next year salary if itincreases by 20%		
A. Rs. 8000 B. Rs. 8064	C.Rs. 7500	D. Rs. 7200
Type 3 – Expenditure and Consum	<u>mption</u>	
15. Price of sugar rises by 20%. By how n	much nargant should	
		the consumption of sugar be
reduced so that the expenditure does	not change?	·
reduced so that the expenditure does A. 20	not change? B. 10	C. 16 2/3 D. 15
reduced so that the expenditure does A. 20 B. The price of an article is cut by 30%. To	not change? B. 10	C. 16 2/3 D. 15

30.	30. Ram gets 20% marks more than Girish. Girish get 20% more than Sanjay. Sanjay gets 20% less than Aditya. If Ram got 576 marks and total marks were 800 then what marks did Aditya get?					
	(a) 600	(b) 480	(c) 500	(d) 600	(e) None of these	

PROFIT AND LOSS

Basic Terminology

Cost Price: C.P. is the price at which one buys anything. **Selling Price:** S.P. is the price at which one sells anything.

Profit/Loss: This is the difference between the selling price and the cost price. If the difference is

positive it is called the profit and if negative it is called as loss.

Profit/Loss %: This is the profit/loss as a percentage of the C.P.

Margin: Normally is in % terms only. This is the profit as a percentage of S.P.

Marked Price: This is the price of the product as displayed on the label.

Discount: This is the reduction given on the marked price before selling it to a customer. If the trader

wants tomake a loss he can offer a discount on the cost price as well

Mark-up: This is the increment on the cost price before being sold to a customer.

It is also known as list price or Tag price which is written on the item. The markup price written is always greaterthan the actual C.P of the item and the percentage rise in the mark-up price is on the C.P of the item.

Percentage increase in the Mark-up price = (MP - CP)/ CPx100

Profit and Loss Terminologies	Meaning	Formulas
Profit or Gain	The selling price of the object > than its cost price	Profit=Selling price(SP) – Cost Price(CP)
Loss	The cost price of the object > than its selling price	Loss=Cost Price(CP) - Selling Price(SP)
Selling Price	The piece for which a commodity is sold is said to be the selling price for that particular item denoted as SP.	$SP = \left(rac{100 + ext{Profit}\%}{100} ight) imes CP$
		$SP = \left(rac{100 - ext{Loss}\%}{100} ight) imes CP$
Cost Price	The expense at which an object is bought is termed as the cost price for that object, abbreviated as C.P.	$CP = \left(rac{100}{100 + ext{Profit}\%} ight) imes SP$ OR $CP = \left(rac{100}{100 - ext{Loss}\%} ight) imes SP$
Discount	To manage the competitors in the industry and promote the sale of goods, vendors offer discounts to consumers.	Discount= MP – SP(Marked Price – Selling Price)

Profit and Loss Terminologies	Formulas in Percentage
Profit percentage(%)	Profit=(SP) - (CP)
	$Profit=(SP)-(CP)$ $Profit percentage\% = \left(\frac{Profit}{Cost Price}\right) \times 100$
Loss percentage(%)	Loss= (CP) - (SP)
	$ ext{Loss percentage}\% = \left(rac{ ext{Loss}}{ ext{Cost Price}} ight) imes 100$
Discount (%)	$\left(rac{ ext{Discount}}{ ext{Marked Price}} ight) imes 100$
Markup (%)	$\left(rac{ ext{markup}}{ ext{cost price}} ight) imes 100$
	Where Markup = Selling Price - Cost

7.	If the selling price of a product is increased by 162, then the business would make a pro of 175 instead of a loss of 19%. What is the cost price of the product?	fit
	a) Rs. 540 b) Rs. 450 c) Rs. 360 d) Rs. 600	
8.	If on selling 12 notebooks a seller makes a profit equal to the selling price of 4 notebook	s,
	what is his percent profit?	
	a) 50 b) 25 c) $16\frac{2}{2}$ d) data inadequate	
9.	By selling 300 apples a seller gains the selling price of 60 apples. What is the ga	in
	percent?	
	a) 200 b) 20% c) 25% d) $16\frac{2}{3}$ %	
10.	. 60% goods are sold at 5% loss while rests are sold at 10% profit. If there is a total pro	fit
	of Rs. 400, then the worth of goods sold is:	
	a) Rs. 24000 b) Rs. 32000 c) Rs. 40000 d) Rs. 5200	0
11.	. A person bought 76 cows and sold 20 cows at 15% profit, 40 cows at 19% profit ar	
	remaining 16 cows' at25% profit and got a profit of Rs. 6570 as a whole. The cost price	of
	each cow is:	
40	a) Rs. 450 b) Rs. 425 c) Rs. 420 d) Rs. 400	
12.	For a new apartment complex a person purchased 60 toilets and 20 shower heads. If the price of a toilet is three times the price of a shower head. Cost of all shower heads is when	
	price of a toilet is three times the price of a shower head. Cost of all shower heads is who of the total cost?	สเ
	a) 9% b) 10% c) 11% d) 13%	
13	. Krishna has 12 oranges with him. He sells x of them at a profit of 10% and remaining at	а
	loss of 10%. He gains 5% on the whole outlay. The value of x is:	_
	a) 7 b) 8 c) 9 d) 10	
14.	. An article when sold for Rs. 960 fetches 20% profit. What would be the percent profit/los	SS
	if 5 such articles are sold for Rs. 825 each?	
	a) 3.125% profit b) 3.125% loss c) neither profit nor loss d) 5% profit	
15.	. A fruit seller buys some oranges at the rate of 4 for Rs. 10 and an equal number more	at
	5 for Rs. 10. He sells the whole lot at 9 for Rs. 20. What is his loss or gain percent?	
	a) Loss percent $1\frac{19}{81}$ b) gain percent $1\frac{19}{81}$ c) no loss or no profit d) loss percent 29	%
16.	. A shopkeeper sells two watches for Rs. 308 each. On one he gets 12% profit and on the	ıe
	other 125 loss. His profit or loss in the entire transaction was:	
	a) 2.4% loss b) 2% profit c) 1.44% loss d) 1.44% profit	
17.	. Ajit and Mohit sold their articles at Rs. 3636 each but Ajit incurred a loss of 10% whi	
	Mohit gained by 1%. What is the ratio of cost price of the articles of Ajit to that of Mohit?)
40	a) 101:90 b)89:92 c) 85:71 d) 87:99	
18.	I sold two watches for Rs. 300 each, one at the loss of 10% and the other at the profit 10%. What is the net profit/loss that resulted from the transaction?	DΤ
	a) 10% profit b) 1% profit c) 1% loss d) no profit, no loss	
19	. A man wants to sell his scooter. There are two offers, one at Rs. 12000 cash and the other	≏r
	at a credit of Rs. 12880 to be paid after 8 months, money being at 18% per annum. Whic	
	is the better offer?	-
	a) Rs. 12000 in cash b) Rs. 12880 at credit c) both are equal d) none of these

INTEREST

SIMPLE INTEREST

If the interest on a sum borrowed for certain period is calculated uniformly, it is called simple interest (SI). Simple interest is a quick method of calculating the interest charge on a loan.

Principal: The amount borrowed or invested.

Loan period or duration: Is the time that the principal amount is either borrowed or invested. It is usually given in years, but in some cases, it may be quoted in months or even days.

Interest: Is the extra money paid by the borrower to the owner (lender) as a form of compensation for the use of the money borrowed.

The statement "rate of interest 10% per annum" means that the interest for one year on a sum of **Rs.100** is

Rs.10. If not stated explicitly, rate of interest is assumed to be for one year.

Formula

SIMPLE INTEREST = PRINCIPAL*RATE OF INTEREST*TIME

100

Example: Calculate the simple interest on Rs. 1000 at the rate of 5% per annum for a time period of 2 years.

Solution: Principal=1000

Rate of interest=5% p.a. Time= 2 years

SIMPLE INTEREST= P*R*T = 1000 *5*2 = Rs.100100 100

COMPOUND INTEREST

Compound Interest is the interest calculated on a sum of money which includes principal and interest calculated for the previous year.

Example: Calculate the interest if compounded annually for an amount of Rs. 100 for a time period of 3 years at the rate of 10 % per annum.

Solution: Here, Principal =Rs. 100Time Period=3 years

Rate of interest =10% per annum

compounding is regular addition of interest

at 10% p.a. is 10

at 10% p.a. is 11

100 interest for 1st year 110 interest for 2nd year 121 interest for 3rd year 133.31 at 10% p.a. is 12.1

Amount 110 is the principal for the 2nd year, amount 121 is the principal for the 3rd year, and amount 133.1 is the principal for the 4th year.
Under compound interest, Amount is found by the formula given below:

Time (in years)	Amount	Interest
1	P(1 + R/100)	$\frac{PR}{100}$
2	$P(1+\frac{R}{100})^2$	$P\left(1+\frac{R}{100}\right)^2-P$
3	$P(1+\frac{R}{100})^3$	$Pig(1+rac{R}{100}ig)^3-P$
4	$P(1+\frac{R}{100})^4$	$P(1+\frac{R}{100})^4-P$
n	$P(1+\frac{R}{100})^n$	$P(1+\frac{R}{100})^n-P$

Ty

		$P(1+\frac{R}{100})^{T}$	$P(1+\frac{R}{100})^2-F$,
		$Pig(1+rac{R}{100}ig)^n$	$P(1+\frac{R}{100})^n-P$	D

30.	Find the difference be	etween C.I and S.I. for	three years. If the prin	cipal is 15625 and rate
	of interest compound	ed annually is 12%.		
	a) Rs.640	b) Rs.702	c) Rs.720	d) Rs.625

NUMBER SERIES

Series completion

In this type of questions, some numbers and/or alphabetical letters are given. They all form a series and the series changes in certain order.

The series may also have one or more numbers/letters missing.

The candidates are required to observe that specific order in which the series changes and then complete theseries.

Similarly, the candidates have to decide about the missing letter or number that would suit for the blank spaceif they continue to change in some order. Some common types are explained in the following slides.

Types of Series:

Number Series Alpha series Letter series Number and letter Analogy

Tricks to solve series completion

Step 1: Observe are there any familiar numbers in the given series like primes numbers, perfect squares, cubes and so on which are easy to identify.

Step 2: Calculate the differences between the numbers. Observe the pattern in the differences.

If the differences are growing rapidly it might be a square series, cube series or multiplicative series. If thenumbers are growing slowly, then it is an addition or subtraction series.

If the differences are not having any pattern then,

- 1. It might be a double or triple series. Here every alternate number or every 3rd number forms series
- 2. It might be a sum or average series. Here sum of two consecutive numbers gives 3rd number or average of first two numbers give next number.

Step 3: Sometimes number will be multiplied and will be added another number.

Types of number series:

I. Prime number Series:

Example: 2, 3,5,7,11,13,

Solution: The given series is prime number series. The next prime number is 17.

Example: 2, 5, 11,17,23,41.

Solution: The prime numbers are written alternately.

II. Difference Series:

Example: 2, 5, 8,11,14,17... 23.

Answer: The difference between the numbers is 3. (17+3=20)

Example: 45, 38,31,24,17... 3.

Answer: The difference between the numbers is 7. (17-7=10).

III. **Multiplication Series:** Example: 2, 6, 18, 54,162... 1458. Answer: The numbers are multiplied by 3 to get next number. (162x3 = 486). n² Series: Example: 1, 4, 9, 16, 25,, 49 Answer: The series is 1^2 , 2^2 , 3^2 , 4^2 , 5^2 ,......The next number is 6^2 =36; Example: 0, 4, 16, 36, 64,.....144. Answer: The series is 0^2 , 2^2 , 4^2 , 6^2 , etc. The next number is 10^2 =100. ٧. n²-1 Series: Example: 0, 3, 8, 15, 24,35, 48,...., Answer: The series is 1^2 -1, 2^2 -1, 3^2 -1 etc. The next number is 8^2 -1=63. Another logic: Difference between numbers is 3, 5, 7, 9, 11, 13 etc. The next number is (48+15=63). VI.n² +1 Series : Example: 2, 5, 10, 17, 26, 37,, 65. Answer: The series is 1^2+1 , 2^2+1 , 3^2+1 etc. The next number is $7^2+1=50$. Example: 3,12,48,192,....,3072. Answer: The numbers are multiplied by 4 to get the next number. (192x4 = 768). **Division Series:** VII. Example: 720, 120, 24,.....,2,1 Answer: 720/6=120, 120/5=24, 24/4=6, 6/3=2, 2/2=1. ** Example: 32, 48, 72, 108,, 243. Answer: . Number x 3/2= next number. 32x3/2=48, 48x3/2=72, 72x3/2=108, 108x3/2=162. VIII. n²+n Series (or) n²-n Series: Answer: The series is 1^2+1 , 2^2+2 , 3^2+3 , 4^2+4 etc. The next number = $5^2+5=30$. Another Logic: The series is 1x2, 2x3, 3x4, 4x5. The next number is 5x6=30. **Another Logic**: The series is 2^2-2 , 3^2-3 , 4^2-4 , 5^2-5 . The next number is $6^2-6=30$. n³ Series: IX. Example: 1, 8, 27, 64, 125, 216, Answer: The series is 1^3 , 2^3 , 3^3 , etc. The missing number is 7^3 =343. n³+1 Series: Example: 2, 9, 28, 65, 126, 217, 344, Answer: The series is 1^3+1 , 2^3+1 , 3^3+1 , etc. The missing number is $8^3+1=513$. XI. n³-1 Series: Example: 0, 7, 26, 63, 124,...., 342. Answer: The series is 1^3 -1, 2^3 -1, 3^3 -1 etc. The missing number is 6^3 -1=215. n³+n Series: XII. Answer: The series is 1^3+1 , 2^3+2 , 3^3+3 etc. The missing number is $6^3+6=222$. n³-n Series: XIII. Example: 0, 6, 24, 60, 120, 210, Answer: The series is 1^3-1 , 2^3-2 , 3^3-3 , etc. The missing number is $7^3-7=336$. Another Logic: The series is 0x1x2, 1x2x3, 2x3x4, etc. The missing number is 6x7x8=336. XIV. n³+n² Series: Example: 2, 12, 36, 80, 150,, Answer: The series is $1^3+1^2,2^3+2^2,3^3+3^2$ etc. The missing number is $6^3+6^2=252$

XV.		n³−n² Series		
	əlar	e: 0,4,18,48,100,		
	•		² etc. The missing number is 6 ³ -6 ² =180	
XVI.		xy, x+y Series:		
	əlar	e: 48,12,76,13,54,9,32,		
	•	: 4+8=12, 7+6=13, 5+4=9 , 3+		
XVII.	٠.	Factorial Series:	_ 0.	
	nnle	e: 1,1,2,6,24,120,		
	•	: 0!=1, 1!=1, 2!=2, 3!=6, 4!=24		
		Clas	s Practice Problems	
	1		per series is given with one term missing.	Choose
	١.	· ·	same pattern and fill in the blank spaces.

Coding Decoding

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26

To remember them use the Code-EJOTY (5, 10, 15, 20, 25)

A-Z, B-Yare opposite to each other. The sum of two opposite letters is 27.A=1, Z=26 so A+Z=1+26=27.

Number coding

In this, either the numerals are assigned to the alphabets of the given code or the alphabets are assigned to the numerals. The candidate has to observe the direction of solving the problem.

Mixed coding

In this, three or more complete messages are given. The procedure to solve is any two messages bearing the common word are picked up. Proceeding similarly, all possible combinations of two messages are analyzed.

Mixed number coding

It is the same as mixed coding but instead of alphabetical codes numerical codes are given.

Decoding

Conversion of the coded numbers or alphabets to the original text. The procedure to decode is the same ascoding. That is, find the pattern that is followed in the given series.

SYMBOLS CODING

In this type of coding, symbols like!, @, # and so on will be used for coding the numbers or alphabets.

1.	that code?	i , now will scool be write	C II III
	a)TDOPV (b) TDPVU (c) DTPOU (d) TDPOU (e) Non-	a of these	
2	2. In a certain code language NUMBER is written as MTL		ritten
	in that code?		
	(a) VHKNHM (b) WJNKMH (c) UHNKHM (d) TDPOU	(e) None of these	
3.	3. In a certain code language HOUSE is written as GPT		en in
٥.	that code?	. 2 , 2	O
	(a) CQPBE (b) ASNBD (c) ASOBD (d) ASNBC (e) No	ne of these	
4.	1. In a certain code language DELHI is written as FGNJ		en in
	that code?		
	(a) CNYCT (b) DMXCT (c) CNWCT (d) CNDTY (e) No	one of these	
5.	5. In a certain code language WALK is written as UYJI,	how will TRIM be written in	that
	code ?.		
	(a) RHGK (b) SGHK (c) ROGK (d) PQGK (e) None of	these	

6. In a code language VICTORY =YLFWRUB than what is the code for FAILURE =? (a) JELOZUH (b) IDLOXUH (c) JDLKWUH (d) IDOLKUH (e) None of these 7. In a code language COULD = BNTKC and MARGIN=LZQFHM than what is the code for MOULDING=? (a) LNTKCHMF (b) CNMFINTK (c) LNKTCHMF (d) NITKCHMP (e) None of these 8. In a code language SAND =VDQG and BIRD=ELUG than what is the code for LOVE=? (a) PRYG (b) ORTG (c) NPUH (d) ORYH (e) None of these 9. In a code language SATELLITE=FUBTLDSHK than what is the code for LAUNCHING=? (a) OVBCFMHGI (b) BVCRTOMPU(c) OVBMCFMHG (d) VBUMCINGP 10. In a system of coding ACCESS is coded CEEGUU, PONTIFF as HHKPORV, LIMERICK as EGKKMNOT and LAMINATE as CCGKNOPV. what is likely to be the word of which the code is COTUV? a)TRAPS b)PARTS c)SMART d) none of these 11. In a certain code language, (A) 'pit na som' means 'bring me water' (B) 'na jo tod' means 'water is life' (C) 'tub od pit' means 'give me toy' (D) 'jo lin kot' means 'life and death' Which of the following represents 'is' in that language? B) na C) tod D) lin 12. If ROSE is coded as 6821, CHAIR is coded as 73456 and PREACH is coded as 961473, what will be the code for SEARCH? A) 246173 B) 214673 C) 214763 D) 216473 13. In a certain code language, '3a, 2b, 7c' means 'Truth is Eternal'; '7c, 9a, 8b, 3a' means 'Enmity is not Eternal' and '9a, 4d, 2b, 8b' means 'Truth does not perish'. Which of the following means 'enmity' in that language? A) 3a B) 7c C) 8b D) 9a 14. In a certain code language, (A) 'pit dar na' means 'you are good' (B) 'dar tok pa' means 'good and bad' (C) 'tim na tok' means 'they are bad' In that language, which word stands for 'they'? A) na B) tok C) tim D) pit 15. In a certain code language TUTDNES is written as STUDENT. How will SUORECS be written in that codelanguage? a. BATTERY B.FASHION **C.SOURCES D.LIMITED** 16. ZA5, Y4B, XC6, W3D, A. E7V B.V2E C.VE5 D.VE7 17. In a certain code 'TOME' is written as '@ \$ * ?' and ARE is written as ' • £ ? ' How can 'REMOTE' be written in that code? a) ?*\$@?£ B. *\$@? £? C. £?*\$@? D. *\$? £@? 18. In a certain code 'PALM' is coded as '!@?\$' and 'ARM' is written as '@*\$', how can 'ALARM' be written inthat code? A.@!@?\$ B. @\$?!@ C. ?@@!\$ D.NONE OF THESE 19. If Pour is wrtten as 4156 Sware is written as 78269 Clear is written as 3@926 Then what is the code for PEARL=? C) 4692@ A) 429@6 B) 4962@ D) 4926@ 20. In a certain code language, 'dom put ta' means 'bring hot food';

'put tir sop' means 'food is good' and 'tak da sop' means 'good bright boy'.

B) pul

A) dom

Which of the following does mean 'hot' in that language?

C) ta

D) Can't be determined

ALPHABET TEST

Class Practice Problems

- Arrange the given words Alphabetical Order and choose the one that comes first.
 (A) Wasp (B) Waste (C) War (D) Wrinkle (E) Wrist
- 2. Arrange the given words Alphabetical Order and choose the one that comes first (A) Science (B) Scrutiny (C) Scripture (D) Scramble (E) Script
- 3. Arrange the given words Alphabetical Order and choose the one that comes first. (A) Intense (B) Intellect (C) Intend (D) Intelligent (E) Integument
- 4. Arrange the given words Alphabetical Order and choose the one that comes first. (A) Nature (B) Native (C) Narrate (D) Nascent (E) Naughty
- 5. Arrange the given words Alphabetical Order and choose the one that comes first.

 (A) Didactic (B) Dictum (C) Dictionary (D) Diastole (E) Dictate
- 6. Arrange the given words Alphabetical Order and choose the one that comes first.
 (A) Praise (B) Practical (C) Prank (D) Prayer (E) Practices
- 7. Arrange the given words Alphabetical Order and choose the one that comes first. (A) Animate (B) Animosity (C) Anguish (D) Ankle (E) Announce
- 8. Arrange the given words Alphabetical Order and choose the one that comes first. (A) Probe (B) Proclaim (C) Proceed (D) Problem (E) Probate
- 9. Arrange the given words Alphabetical Order and choose the one that comes first. (A) Signature (B) Sight (C) Shrine (D) Shrill (E) Shrink
- 10. How many pairs of letters in the word 'CHAIRS' have as many letters between them in the word as in the alphabet?

(A) 2 (B) 3 (C) 1 (D) 4

- 11. How many pairs of letters are there in the word " CASTRAPHONE" which have as many letters between them in the word as in the alphabet?

 (A)4 (B)5 (C)6 (D)1
- 12. A B C D E F G H I J K L M N O P Q R S T U V W X Y Z.

Which letter in this series is the eighth letter to the right of the letter which is tenth letter to the left of the last but one letter of the series?

(A) A (B) X (C) C (D)W

13. How many meaningful English words can be formed with the letters ESRO using each letter only once in each word?

(A) NONE (B) 1 (C) 3 (D) 2

14. If in the word 'DISTURBANCE', the first letter is interchanged with the last letter, the second letter is interchanged with the tenth letter and so on, which letter would come after the letter T in the newly formed word?

(A) S (B) I (C) N (D)T

15. If the first and second letters in the word DEPRESSION' were interchanged, also the third and the fourth letters, the fifth and the sixth letters and so on, which of the following would be the seventh letter from the right?

(A) R (B)P (C)D (D)S

16. What should come next in the following letter sequence?

AABABCABCDABCDEABCD

(A)A (B)E (C)C (D)B

- 17. If the first half of the English alphabet is reversed and then next portion of English alphabet is reversed so as 'A' takes the portion of 'M' and 'N' takes the portion of 'z' then which letter will be 6th to the left of 17th letter to the right of 7th letter from the left?

 (A) U (B) V (C) C (D) D
- 18. From the word 'LAPAROSCOPY' how many independent meaningful words can be made without changing the order of the letters and using each letter only once ?

 (A) 3 (B)4 (C)2 (D)1
- 19. From the word 'ASTOUNDER', how many independent words can be made with-out changing the order of the letters and using each letter only once ?

 (A)1 (B)2 (C)3 (D)4

- 20. Arrange these words in alphabetical order and tick the one that comes last
 - 1. Abandon 2. Actuate 3. Accumulate 4. Acquit 5. Achieve
 - (A) Actuate (B) Abandon (C) Accumulate (D) Achieve

TUTORIAL PRACTICE PROBLEMS

1. If the first and second letters in the word 'MISFORTUNE' were interchanged, also the third and the fourth letters, the fifth and the sixth letters and so on, which letter would then be the eighth letter counting to your left?

(A) O (B) F (C) T (D) I

2. How many independent words can 'HEARTLESS' be divided into without changing the order of the letters and using each letter only once ?

(A) 2 (B) 3 (C) 4 (D) 5

3. Arrange the following words will come in middle if all of them are arranged alphabetically as in a dictionary?

(A)SAVE (B) SAVIOUR (C) SAVAGE (D) SAVOUR

4. How many meaningful English words can be made from the letters EOPR using each letter only once?

(A) NONE (B) 1 (C) 2 (D) 3

- If the sequence of the English alphabet is reversed then which letter is 7th to the left of second vowel from the right of English alphabet in the new series?
 (A) U (B) V (C) L (D) M
- 6. Q23B9V5LSRFP012

If one is subtracted from each of the numbers, which of the following will be the fourth to the right of the thirteenth from the right?

(A)4 (B) 8 (C) 2 (D) 1

- 7. If the positions of the third and tenth letters of the word 'DOCUMENTATION' are interchanged, and likewise the position of the fourth and seventh letters, the second and sixth letters, is also interchanged, which of the following will be eleventh letter from the right end?
 - (A) U (B) C (C) T (D)I
- 8. How many letters are there in the word 'CREATIVE' which have as many letters between them in the word as in the alphabet ?

(A) 1 (B) 2 (C) 3 (D) 4

9. If the last four letters of the word 'CONCENTRATION' are written in reverse order followed by next two in the reverse order and next three in the reverse order and then followed by the first four in the reverse order, counting from the end, which letter would be eighth in the new arrangement?

(A) E (B) N (C) R (D) T

10. If the position of the first letter of English alphabet is interchanged with the position of the fourteenth letter, second letter with fifteenth letter, and so on, in such a way that M is interchanged with Z, then which of the following letters will be 7th to the right of 13th letter from the right?

(A) U (B) G (C) H (D) I

11. LAP BUT CAR SON HID If the positions of the first and the third alphabets of each of the words are interchanged, which of the following would form a meaningful word in the new arrangement?

(A)HID (B) SON (C) LAP (D) BOTH LAP AND BUT

12. Of the six members of a panel sitting in a row X is to left of Q but on the right of P. Y is in the right of Q but is on the left of Z, Z is to the left of R. Find the members who are at the extreme?

(A) QZ (B)PR (C) XY (D) AZ

13. C U B A E D E D A B E B A U C D B C A D B D U B C A C B E D A

If all the A's are dropped from the above arrangement, which of the following will be

eleventh from the left end of the above arrangement? (A)E (B) D (C) C (D)U

- 14. If it is possible to form a word with the first , fourth, seventh and eleventh letters in the word "SUPERFLUOUS" write the first letter of that word other wise x is the answer (A) S (B) L (C) E (D) X
- 15. If it is possible to make a meaningful word from the third, fifth, sixth, eighth and tenth letters of the word PAROCHIALISM using each letter only once, third letter of the word would be your answer. If more than one such word can be formed, your answer would be 'y' and if no such word can be formed, answer is 'G'.
 (A) Y (B) G (C) A (D) X

16. In the following Color sequence, R stands for Red, Y for Yellow, G for Green, B for Blue and W for white of the sequence is continued, which color will come next?

BBRBRWBRWGBRWGYBRBRWBRW

(A)White (B)Yellow (C)Red (D)Green

- 17. How many pairs of letter are there in the word 'BUCKET' which have as many letters between them in the word as in the alphabet ?

 (A)1 (B)3 (C) more than 3 (D) 2
- 18. If the positions of the fifth and twelfth letters of the word 'GLORIFICATIONS' are interchanged; and likewise the position of the fourth and fourteenth letters, the third and tenth letters, the second and eleventh letters and the first and thirteenth letters are interchanged, which of the following will be twelfth letter from the right end?
 (A) O (B)T (C) I (D) R
- 19. How many pairs of letters are there in the word 'SEQUENTIAL' which have as many letters between them as are in the alphabet ?
 (A) 1 (B) 2 (C) 3 (D) 4
- 20. Select the combination of numbers so that the letters are arranged accordingly in the form of meaningful word.

T L P N A E 12 3 4 5 6

(A)3,2,5,4,1,6 (B)3,2,5,4,6,1 (C) 4,5,3,6,2,1 (D) 4,6,1,3,5,2

ARITHMETIC & GEOMETRIC PROGRESSION

An Arithmetic Progression (A.P.) is a sequence in which the difference between any two consecutive terms is constant. Let a = first term, d = common difference

Then, $nth term a_n = a + (n-1)d$

The sum of n terms of an A.P. whose first term is a and common difference is d, is given by

$$S_n = \frac{n}{2} \left[2a + (n-1)d \right]$$

The sum of n terms of an A.P. whose first term is a and last term is l is given by the formula:

$$S_n = \frac{n}{2} [a+l]$$

AM (Arithmetic mean): If a, b, c are in AP then the arithmetic mean is given by b = (a+c)/2 **Inserting AM:**

To insert k means between a and b the formula for common difference is given by **d=(b-a)/k+1** For Example: Insert 4 AM's between 4 and 34d= (34-4)/4+1= 30/5= 6

: The 4 AM are 4+6=10, 10+6=16, 16+6=22, 22+6=28

Geometric Progression: Geometric sequences are powers r^k of a fixed number r, such as 2^k and 3^k . The general form of a geometric sequence is

The n-th term of a geometric sequence with initial value a and common ratio r is given by

$$a_n = a r^{n-1}.$$

Such a geometric sequence also follows the recursive relation

$$a_n = r \, a_{n-1}$$
 for every integer $n \ge 1$.

Sum of G.P.= $a(1-r^n)/(1-r)$

GM (Geometric mean): If a, b, c are in GP Then the GM is given by $b = \sqrt{ac}$

Note: 1. AM>GM>HM 2. GM^2=AM * HM

Inserting GM: To insert k means between a and b the formula for common ratio is given by $r = (b/a)^{(1/(k+1))}$

For example: Insert 4 GM's between 2 and $486r = (486/2)^{(1/(4+1))} = (243)^{(1/5)} = 3$ \therefore The 4 GM are 2x3 = 6, 6x3 = 18, 18x3 = 54, 54x3 = 162.

Practice Problems

				c= 1 =
	(a) 16 th	(b) 17 th	(c) 20 th	(d) 25 th
7.	Which term of the	A.P. 3, 8, 13 is 78?	?

(a) 26	(b) 21	(c) 23	(d) 20

RATIO AND PROPORTION

RATIO

Ratio is a comparison of two quantities by division. Ratio represents the relation that one quantity bears to theother. If **a** and **b** are two quantities of the same kind, then **a/b** is known as the ratio of **a** and **b**.

Denoted as **a**: **b**, where the first term of the ratio is called as **antecedent**, while the second term is called as **consequent**.

A **"ratio"** is just a comparison between two different things. The ratio between 30 kg and 50 kg is 3:5

Example: In the park mentioned above, the ratio of ducks to geese is 16 to 9. How many of the 300birds are geese?

Solution: The ratio tells that, out of every 16 + 9 = 25 birds, 9 are geese. That is, $\frac{9}{25}$ of the birds are geese. Then there are $(\frac{9}{25})(300) = 108$ geese.

Example: In a school the ratio of number of boys and girls is 9:6. If there are present 180 boys. Find the total number of students in the school?

Solution: Let the number of boys and girls be 9x and 6x. Then 9x=180, x=20

Therefore, the total number of students=15x, Thus, 15(20) =300

Different Types of Ratios

1. Duplicate Ratio:

a2: b2 is called duplicate ratio of a: b

2. Triplicate Ratio:

a³: b³ is called triplicate ratio of a: b

3. Compound Ratio:

ab: cd is the compound ration of a: c and b:d. It is the ratio of the products of the antecedents to that of the consequents of the two or more given ratios.

PROPORTION

The equality of two ratios is called as proportion. a, b, c, and d are said to be in proportion if,

a:b=c:d or a:b::c:d

In a proportion, the first and fourth terms are known as extremes, while second and third terms are known as means.

PRODUCT OF EXTREMES=PRODUCT OF MEANS a*d=b*c

Continued Proportion

Four quantities: a, b, c and d are said to be in continued proportion, if **a:b=b:c=c:d**.

Three quantities: a, b and c are said to be in continued proportion, if **a: b=b: c** or **ac=b*b b** is said to be the **mean proportional** between **a** and **c** and **c** is said to be a **Third proportional** to **a** and **b**.

Example: If 40, x, x, 40 are in proportion, then find the value of x.

Solution: Product of means = product of extremes

$$x * x = 40 * 40$$

 $\Rightarrow x^2 = 1600 \Rightarrow x = 40$

FOURTH Proportion – If four quantities a, b, c and x are such that a : b :: c : x, then ax=bc and x is called fourthproportion of a, b and c.

Example: A can do a piece of work in 12 days, B is 60% more efficient than A. Find the number of days that Btakes to do the same piece of work.

Solution: Ratio of efficiencies of A and B=100: 160 = 5:8

Since, efficiency is inversely proportional to the number of days.

Ratio of days taken to complete the job=8:5No. of days taken by B=5/8 *12=15/2

Variation

If two quantities are related in such a way that as quantity 'x' changes, it also brings a change in the second quantity 'y', then the two quantities are in variation. There are two types of variations:-

- 1. **Direct Variation:** The quantity 'x' is in direct variation to 'y', if an increase in 'x' causes an increase in 'y' and decrease in 'x' causes 'y' to decrease proportionally. Therefore, **x= ky**, where 'k' is constant of proportionality.
- **2. Inverse Variation:** The quantity 'x' is in inverse variation to 'y', if an increase in 'x' causes an decrease in 'y' and decrease in 'x' causes 'y' to increase proportionally. Therefore, **x=k/y**, where 'k' is constant of proportionality.
- **3. Joint Variation:** If there are more than 2 quantities x,y and z; and x varies with both y and z, then x is in joint variation to y and z. It can be expressed as kyz, where k is constant of proportionality. Example: Men doing a work in some number of days working certain hours a day

Partnership

Persons two or more than two persons when start and run the new business jointly of their own choice, thepersons who start the business are called **partners** and the agreement between them is called **partnership**.

Working and Inactive partners:

A partner who manages the business is called **working/active partner** and the one who simply invests themoney is called **inactive partner**.

Ratio of division of gains:

- 1. The amount investment of all the partners are for the same time period, the gain or loss amount is distributed among the partners in the ratio of their invested amount.
- 2. When investments are for different time periods

Example: A invests Rs. R1 for T1 months and \dot{B} invests Rs. R2 for T2 months, then (A's share of profit): (B's share of profit) = A*T1 : B*T2

Partnership is of two types:

- 1. Simple Partnership
- 2. Compound Partnership
- 1. **Simple Partnership:** When investments of all the partners are for the same period of time, the profit or loss is distributed among the partners in the ratio of their original investments. Suppose A and B invest `p and `q respectively for a year in a business, then at the end of the year. **Share of A's profit (loss): Share of B's profit (loss) = p : q**
- 2. Compound Partnership: When investments of all the partners are for different period of time, then equivalent capitals are calculated for a unit of time and the profit or loss is divided in the ratio of the product of time and investment.

Suppose A and B invest `p and `q for x months and y months respectively, thenShare of A's profit (loss): Share of B's profit (loss) = px : qy

Example: A and B started a business investing Rs. 90,000 and Rs 20,000 respectively. In what ratio should the profit earned after 2 years be divided between A and B respectively?

A. 9:2

B 3:2

C. 18:20

D. 18:4

Solution: Exp: A: B = 90000 : 20000 = 90 : 20 = 18 : 4 = 9 : 2

Example: Ajay, Bhavan and Chetan started a business together. Thrice the investment of Ajay, twice the investment of Bhavan and the investment of Chetan are equal. Find the ratio of their respective profits at theend of the year?

A. 1:2:1

B. 2:3:6

C. 3:2:1

D. 1:2:3

Solution: Let the investments of Ajay, Bhavan and Chetan be Rs. a, Rs. b and Rs. c respectively.

$$3b = 2b = c$$
, $a = c/3$, $b = c/2$.

Ratio of profits of Ajay, Bhavan and Chetan at the end of one year = Ratio of their respective investments = 2:3:6.

Class Practice Problems

Type 1 - Percentage & Ratio

- 1. The salaries of A, B, C are in the ratio 2:3:5. If the increments of 15%, 10% and 20% are allowed respectively in their salaries, then what will be new ratio of their salaries?

 A. 3:3:10

 B. 10:11:20

 C. 23:33:60

 D. Can't be determined
- 2. In a class of 125, 20% students can dance.2/5 of the total students can sing and 2/5 of the remaining students are good at sports. What is the respective ratio of the students who can dance to students who are good at sports?

A. 5:4

B. 3:2

C. 4:5

D. 3:7

3. X: Y: Z is in the ratio of 3: 2: 5 A. Rs. 200 B. Rs. 250		oney will Z get out of Ro D. Rs. 3	
4. Rate of income tax is increase person remains the same as Rs.10000, find his present inc	was in the last yea	r. If his income for the	
A. 9000 B. 8000	C. 5000	D. 6000	
5. Mohan distributed his assegrandchildren in such a way to tenth of each daughter. His work together. If each daughter record. A. 2.5 Lakhs B. 2.7 Lakh	hat each grandchild wife got 40% of the	I got one-eighth of each total share of his sons	n son and one- and daughter ary of his wife?
Type 2 - Coin Based P	<u>roblem</u>		
6. A sum of Rs. 36.90 is made u The number of 10 pcoins is?	ıp of 180 coins whic	ch are either 10 p coins	or 25 p coins.

16. Sudhir and Tushar invested Rs. x and Rs. 3x respectively in a business. The time period of Sudhir and Tushar is in the ratio 2:3. If the profit share of Tushar is Rs. 270000, then find	
the total profit if they continue the business for 3 more years? A. Rs. 330000 B. Rs. 660000 C. Rs. 1320000 D. Rs. 1640000 E. Rs. 1240000 17. R, Q and P start a business together with initial investment of Rs. 20000, Rs. 30000 and Rs 25000 respectively. After 8 months, R and Q take out Rs. 10000 each from the investment. Total profit earned at the end of the year is Rs. 16400. Find out P's share of profit.	S.
A. Rs. 5500 B. Rs. 6500 C. Rs. 4000 D. Rs. 6000 E. Rs. 5000 18. A, B, C and D invest Rs. 5000, Rs. 4500, Rs. 4000 and Rs. 8000 respectively in a business After one year, A withdraws his entire money, B withdraws his after 2nd year, C withdraws his money after 3rd year. If at the end of the 4th year they earned a total profit of Rs. 14500, find	is
A's share in the profit?	
A. Rs. 2500 B. Rs. 4500 C. Rs. 8000 D. Rs. 3500 E. None of these 19. A and B start a business. A invests Rs 'X' and B invests Rs 45000. 9 months later withdraws half the amount. The profit received by A at the end of 1 year is 22.22% less than the of B. What is the value of 'X'?	Α
A. 40000 B. 45000 C. 42000 D. 48000 E. 36000 20. Siraj and Hiten started a business with investment of Rs. 15000 and Rs. 18000, respectively After one year, Siraj increased his investment by 10% while Hiten decreased his investment by 10%. At the end of two years, total profit made by the business is Rs. 13140. Find the share of	y
profit of Hiten.	
A. Rs. 6220 B. Rs. 6840 C. Rs. 6280 D. Rs. 7480 E. Rs. 6530 21. Dhawan and Satish started a start-up by investing Rs. 35000 and Rs. 21000 respectively The ratio of months invested by Dhawan to Satish is "p:q" and the number of months for which Satish invested into the business was 4 less than the number of month for which Dhawan invested. If the ratio of the total profit to the share of Dhawan was 7:5, then find p:q.	h
A. 2:5 B. 1:3 C. 1:2 D. 3:4 E. 3:2	

- 22. Three businessman M, Q and P started a joint venture together with their initial investments in the ratio 4x:2x:x respectively. After 6 months, P added 50% of the initial investment, Q invested twice the amount more as before while M withdrew 25% of his investment. Find the ratio of the profits of M, Q and P respectively at the end of the year.
- A. 14:5:16 B. 16:5:14 C. 5:14:16 D. 14:16:5 E. None of these 23. In a joint venture company, A and B invested Rs. 32000 and Rs. 56000 respectively. A received Rs. 1000 per month as salary for managing the business and the remaining profit was divided in the ratio of their investments. At the end of year A received a total of Rs. 20000. How much did B get?
- A. Rs. 14000 B. Rs. 16000 C. Rs. 22000 D. Rs. 35000 E. None of these 24. Vijay and Mamta entered into a partnership with Rs 30000 and Rs 36000 respectively. Shubhash joined them after 'm' months and contributes Rs 48000 and Mamta left 'm' months before the end of year. If end of the year Vijay, Mamta and Shubhash share profit in the ratio 10:9:12, then find the value of 'm'.
- A. 3 B. 4 C. 1 D. 2 E. 5 25. Three persons A, B, and C invest in a business in the ratio of 5 : 6 : 4. If A and C invested for one year, then B should invest for how many months if he wants to receive 25% of the total profit at the end of one year?
 - A. 4 months B. 6 months C. 3 months D. 9 months E. None of these

ALLIGATION AND MIXTURES

ALLIGATIONS

The technique of alligation is applicable in all the cases where two extreme values are given and one average value is given. It is a very useful technique which can be applied in chapters like Percentage, Simple interest, Ratio & proportion, Average etc.

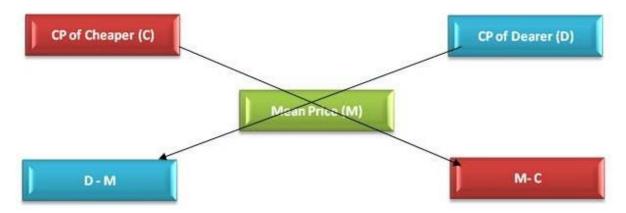

This technique enables us to calculate the ratio in which extreme values/ prices/ interests/ ratios and averages should be mixed so that a given average value/price/interest/ratio and average can be obtained.

Alligation is the rule that enables us to find the proportion in which the two or more ingredients at the given price must be mixed to produce a mixture at a given price. Thus,

Quantity of cheaper = (C.P. of dearer) - (Mean Price)

Quantity of dearer Mean Price - CP of cheaper

Find it complicated to remember the Formula?? Don't worry, keep in mind the below short cut by following the direction of the arrows:

Attention please!!

- 1. Mean price is always less then dearer price and is always more than cheaper price.
- 2. The price of the first kind should always be on the left hand side.
- 3. Keep in mind the simple point that the order of the ratio follows the order of what is written at the top.

MIXTURES

Mixture or alloys contains two or more ingredients of certain quantity mixed together to get a desired quantity. The quantity can be expressed as a ratio or percentage. For ex: 1 liter of a mixture contains 250ml water and 750ml milk. That means, ¼ of mixture is water and ¾ of mixture is milk. In other words, 25% of mixture is water and 75% of mixture is milk.

Concept 1: Finding the Quantity of an Ingredient in the Mixture

Illustration 1:

A mixture contains alcohol and water in the ratio 4:3. If 7 litres of water is added to the mixture, the ratio of alcohol and water becomes 3:4. Find the quantity of alcohol in the mixture.

Solution:

Let the alcohol: water be 4x: 3x.

Adding 7 litres of water, the fraction becomes 4x/(3x + 7) = 3/4. On solving, we get x = 3 and alcohol = 4x = 12.

Concept 2: Quantity of Ingredient to be Added to Increase the Content of Ingredient in the Mixture to y%

Illustration 2:

A mixture of water and milk contains 80% milk. In 50 litres of such a mixture, how many litres of water is required to increase the percentage of water to 50%?

Solution:

Total mixture = 50 litres

Milk = 80% of 50 = 40 litres

Water = 20% of 50 = 10

litresLet 'x' litres of water is added.

Now, milk = 40 litresWater = 10+x

Total = 50+x

Now. 50% of total = Water

 $\frac{1}{2} x (50 + x) = 10 + xx = 30$ litres

Concept 3: Quantity of Ingredient to be Added to Change the Ratio ofIngredients in a Mixture

729 ml of a mixture contains milk and water in the ratio 7:2. How much more water is to be added to get a newmixture containing milk and water in the ratio of 7:3?

Solution:

Milk and water in the original liquid = $7/9 \times 729 = 567$ and water = $2/9 \times 729 = 162$. Let water to be added = x.

Then, 567/(162 + x) = 7/3

Hence, we get 1701 = 1134 + 7x; or 7x = 567; or x = 81

Concept 4: Replacement of a Part of a Solution

If a vessel contains A liters of milk and if B litres of milk is withdrawn and replaced by water, and again if B litres of mixture is withdrawn and replaced by water and this operation is replaced n times in all, then

Quantity of milk left after nth operation) nitial quantity of milk)

Thus, quantity of milk/alcohol left after nth operation = $[A(1 - (B/A))^n]$ Or in other words,

Final Amount of ingredient that is not replaced =

$$\text{Initial Amount} \times \left(\frac{\text{Vol. after removal}}{\text{Vol. after replacing}} \right)^n$$

Class Practice Problems

Type 1- Alligation

In what ratio must rice at Rs.	. 43/kg be mixed with	rice at Rs 56/kg, so tha	t mixture be worth
Rs. 51/kg?	· ·		
A. 3:7	B. 5:8	C. 7:3	D. 7:5
2. In what ratio must rice at Rs.		rice at Rs 12/kg, so tha	it mixture be
sold at Rs. 18/kg, withprofit of 2 A. 3:5	:0%? B. 5:3	C. 7:5	D. 7:3
3. In what ratio must rice at Rs.			
the mixture at 40/kg, shopkeepe		noo at ito 2 mag, oo mat	by coming
A. 3:4	B. 5:4	C. 4:5	D. 4:3
4. A shopkeeper has 50 kg rice,			
profit. He gain 14% on the whole		· • • • • • • • • • • • • • • • • • • •	•
A. 20 kg 5. A merchant has 25 kg rice, s	B. 21 kg		D. 23 kg aining at 5%
loss. He gain 7% on the whole t			
A. 20 kg	B. 30 kg		D. 35 kg

(d)30 kg en out and replaced by now contained in the (d)67.8 L he same elements are in (d) 7: 3 10 litres of the mixture ame 2: 3. The quantity (d) 32 litres water are taken out of nitty of milk and water?

7. 20 litres of milk is take	en out from a vessel co	ontaining 200 litres of p	oure milk and replaced with
	•	ed x number of times	to leave 145.8 litres of pure
milk in the mixture. Find	the value of x.		
(a) 3	(b) 5	(c) 2	(d) 4
8. A milkman has 40 lit	ers mixture of milk an	d water in the ratio of	f 5:3. If he sold 16 liters of
mixture and then 12 lite	ers of milk added to the	e mixture. Again he s	old 20 liters of mixture and
then he added 8 liters of	of milk to the mixture.	Γhe final quantity of th	ne water is what percent of
the final quantity of the i	milk?		
(a) 10%	(b) 15%	(c) 20%	(d) 25%
9. Vessel A contains the	mixture of Petrol and	Diesel in the ratio of	3: 2, vessel B contains the
mixture of Petrol and Ke	erosene in the ratio of	1: 2 and Vessel C co	ntains mixture of Kerosene
and Diesel in the ratio	of 2: 3. If all the vesse	Is are mixed in the ra	tio of 4: 3: 2, then find the
respective ratio of Petro	l, Diesel and Kerosene	in the final mixture?	
(a) 46: 58: 31	(b) 56: 63: 32	(c) 67: 72: 41	(d) 17:14:14
10.A Jar contains 80 lite	ers mixture of milk and	water and the quantity	y of the water is 30% of the
total mixture. If X liters of	of mixture is taken out	and replaced by water	er and then again the same
quantity of the mixture	is taken out and repla	ced by water. If final	quantity of the milk is 31.5
liters, then find the value	e of x?		
(a) 20 liters	(b) 28 liters	(c) 30 liters	(d) 40 liters
11.How many kilograms	s of rice of Rs 6.4/kg sh	ould be mixed with 10	0 kg of rice of Rs 4.8/kg, in
such that by selling the	mixture at 20 % profit	, which is Rs. 1.12 m	ore than the average price
per kg of both the variet	ies of rice		
(a) 12 kg	(b) 15 kg	(c) 10 kg	(d) 11 kg
12. The vessel A contain	s the ratio of the milk &	water in the ratio of 8:	5 and the vessel B contains
60 liters mixture of milk	and water in the ratio	of 7:5. If vessel A and	I B mixture mixed, then the
ratio of the milk and wat	er becomes 3:2, what	is the initial quantity o	f the milk in vessel A?
(a) 32 liters	(b) 24 liters	(c) 40 liters	(d) 48 liters
13.A vessel has certain	quantity of milk and th	en 8 liters of milk is to	aken out and replaced with
water. Now 10 liters of m	nixture taken out and re	place with water and a	again 12 liters of the mixture
is taken out and replace	ed with water. If the in	tial quantity of the mi	lk in the vessel is 80 liters,
then what is the final qu	antity of the milk?		
(a) 53.55 liters	(b) 54.78 liters	(c) 55.89 liters	(d) 56.19 liters
14.Ratio of the milk to w	vater in vessel A to B is	s 3:2 and 5:6 respecti	vely and the quantity of the
milk in vessel B is 5 liter	s less than the quantit	y of the water in vess	el B. If vessel A and Vessel
B mixtures are mixed,	then the ratio of milk t	o water becomes 11:	10, then what is the initial
quantity of vessel A?			
(a) 60 liters	(b) 50 liters	(c) 40 liters	(d) 30 liters
15.The cost price of mil	k in vessel A is Rs.66	per liter and the cost	price of milk in vessel B is
Rs.51. If milk in vessel	A and B are mixed, the	en the shopkeeper so	d 37.5 liters of this mixture
at the cost price of milk	in vessel A while he go	ets the profit of 10%.	If he sold the same mixture
at the cost price of mill	k in vessel B, then wh	at is the percentage	of loss or profit earned by
shopkeeper?			
(a) 8% profit	(b) 8% loss	(c) 15% loss	(d) 15% profit

PERMUTATION AND COMBINATION

Principal Of Multiplication:

AND suggests the use of Multiplication and shows that more than one operation has to be performed at a time. It also gives the idea that there should be one starting point and one end point.

Multiplication

If an event can occur in m different ways, and following which another event can occur in n different ways, then the total number of occurrence of the events in the given order is m * n

Principal Of Addition:

OR suggests the use of Addition and shows that exactly one operation hasto be performed at a time out of the given set of all the possible operations.

PERMUTATION

A permutation is an arrangement in adefinite order of a number of objects taken some or all at a time.

Linear Arrangement

Number of permutations of n distinct objects among r different places, where repetition is not allowed, is P(n,r) kind, and where repetition is notallowed, is

Number of permutations of n objects, when all of them are identical = n!/n!

Circular Arrangement

Number of ways to arrange n distinct objects on n places around a circle = (n-1)!

Number of arrangements of n beads forforming a necklace = (n-1)!/2

(In case of the necklace or garland, anticlockwise and clockwise arrangements are same) Number of selection of k consecutivethings out of n things in a circle

- = n, when k < n
- = 1, when k = n

Polygon Arrangement

Number of ways to arrange n distinct objects along the sides of a r sided regular polygon with every side having n/r objects = n!/r

If the polygon is not regular, then the number of arrangements will be

$${}^{n}P_{r} = \frac{n!}{(n-r)!}$$
 (0 < r < n)

Number of permutations of n distinct objects among r different places, where repetition is allowed, is n^r

Number of permutations of n objects in which p objects are alike of one kind, q are alike of second, r are alike of third and so on and remaining are of different

If n people are to be arranged around a rectangular table, such that there are equal number of people on each side of the table, then total number of arrangements will be n!/2

<u>Dearrangement</u>

Number of arrangements of n distinct things in a row, such that none of themoccupies its original place is

=
$$n! [1/0! - 1/1! + 1/2! - 1/3! + ... + (-1)^n/n!]$$

Dearr.
$$(2) = 1$$
, Dearr. $(3) = 2$,

COMBINATION

A combination is a selection, in no definite order, of a number of objectstaken some or all at a time.

Number of combinations of n distinct objects taken r at C(n,r) a time, where repetition is not allowed, is

Dearr.
$$(4) = 9$$
, Dearr. $(5) = 44$

Miscellaneous

$${}^{n}Cr = \frac{n!}{r! (n-1)!}$$
 (0 < r < n)

Number of ways 4 different letters can be posted in 7 different letter boxes = 47

Number of ways n identical things can be arranged among r different places $=_r$ n

e.g. Number of ways 4 identical rings can be worn in 5 fingers of a hand = 5^4

Number of ways n different things can be arranged among r different places

$$= (n + r - 1)!/(r - 1)!$$

e.g. Number of ways 4 different rings can be worn in 5 fingers of a hand = 5.6.7.8

Sum of all 'r' digit numbers formed by using each of the given 'n' non-zero distinct digits exactly once (no repetition) = (Sum of all the digits) (1111... r times) ⁿPr-1

Sum of all 'r' digit numbers formed by using each of the given 'n' non-zero distinct digits (with repetition) = (Sumof all the digits) $(1111... r times) n^{r-1}$

Number of combinations of n distinct objects among r different places, where repetition is allowed, is n+r-1_{Cr}

Number of combinations or distributions of n identical objects among r different places is $^{n+r-1}Cr-1$ Also the whole number solutions of Equation ,

$$(x + y + z + ... (r \text{ variables}) = n+r-1 Cr-1$$

Number of combinations or distributions of n identical objects among r different places such that each place gets at least 1 is $n-1_{Cr-1}$

Also the natural number solutions of Equation, (x + y + z + ... (r variables) = (n) = n-1 Cr-1

Number of selections out of n distinctobjects

= (Select None) + (Select One)+ (Select Two)

$$= {}^{n}C_{0} + {}^{n}C_{1} + {}^{n}C_{2} + ... + {}^{n}C_{n} = 2^{n}$$

Number of ways in which a selection can be made by taking some or all out of p + q + r + ... things where p are alike of one kind, q alike of second, r alike of third and so on is (p+1)(q+1)(r+1)... - 1

Number of zero or more selections out of n same objects = 1 + 1 + 1 + ... + 1 = n + 1

Number of one or more selections out of n same objects = 1 + 1 + 1 + ... + 1 = n

Number of lines in a plane formed by npoints (where no three points are collinear) = ⁿC₂

Number of diagonals in a regular polygon = ${}^{n}C_{2} - n$

Number of triangles formed in a planeusing n points (where no three points are collinear) = ${}^{n}C3$

Formulae related to Combination

- a) nC0 = 1 = nCn
- b) nC1 = n = nCn-1
- c) nCn-r = nCr
- d) $nCa = nCb \square a + b = n$
- e) nCr + nCr-1 = n+1Cr
- f) $nC0 + nC1 + nC2 + ... + nCn-1 + nCn = 2^n$
- g) $nC0 + nC2 + nC4 + ... = nC1 + nC3 + nC5 + ... = 2^{n-1}$

GROUPING & DISTRIBUTION

Number of ways in which n distinctobjects can be distributed equally among r people

$$= n!/p! q! r!... (n = p + q + r...)$$

Number of ways in which n distinct objects can be distributed equally among r groups

- = n!/ [(n/r)!]^r (if groups are distinct)
- = n!/ r! [(n/r)!]^r (if groups are notdistinct)

PROBABILITY

Probability or chance is a common term used in day-to-day life. For example, we generally say, 'it may rain today'. This statement has a certain uncertainty.

Probability is quantitative measure of the chance of occurrence of a particular event.

If all the possible outcomes of an experiment are known but the exact output cannot be predicted in advance, that experiment is called a random experiment.

Examples

Tossing of a fair coin

When we toss a coin, the outcome willbe either Head (H) or Tail (T)

Throwing an unbiased die

Die is a small cube used in games. It has six faces and each of the six faces shows a different number of dots from 1 to 6. Plural of die is dice.

When a die is thrown or rolled, the outcome is the number that appears on its upper face and it is a random integer from one to six, each value being equally likely.

Drawing a card from a pack of shuffled cards

A pack or deck of playing cards has 52 cards which are divided into four categories as given below

Spades (♠)Clubs (♣)

Hearts (♥) Diamonds (♦)

Each of the above mentioned categories has 13 cards, 9 cards numbered from 2 to 10, an Ace, a King, a Queen and a jack

Hearts and Diamonds are red facedcards whereas Spades and Clubs are black faced cards.

Kings, Queens and Jacks are called face cards

Taking a ball randomly from a bagcontaining balls of different colours

Sample Space

Sample Space is the set of all possible outcomes of an experiment. It is denoted by S.

Examples

When a coin is tossed, $S = \{H, T\}$ where H = Head and T = Tail

When a dice is thrown, $S = \{1, 2, 3, 4, 5, 6\}$

When two coins are tossed, $S = \{HH, HT, TH, TT\}$ where H = Head and T = Tail

Events are said to be equally likely if there is no preference for a particular event over the other.

Examples

When a coin is tossed, Head (H) or Tailis equally likely to occur.

When a dice is thrown, all the six faces (1, 2, 3, 4, 5, 6) are equally likely to occur.

Two or more than two events are said to be mutually exclusive if the occurrence of one of the events excludes the occurrence of the other

This can be better illustrated with the following examples

When a coin is tossed, we get either Head or Tail. Head and Tail cannot come simultaneously. Hence occurrence of Head and Tail are mutually exclusive events.

When a die is rolled, we get 1 or 2 or 3 or 4 or 5 or 6. All these faces cannot come simultaneously. Hence occurrences of particular faces when rolling a die are mutually exclusive events.

Note : If A and B are mutually exclusive events, $A \cap B = \phi \phi$ where $\phi \phi$ represents empty set.

Consider a die is thrown and A be the event of getting 2 or 4 or 6 and B be the event of getting 4 or 5 or 6. Then

 $A = \{2, 4, 6\} \text{ and } B = \{4, 5, 6\}$

Here $A \cap B \neq \emptyset$. Hence A and B are not mutually exclusive events.

Events can be said to be independent if the occurrence or non-occurrence of one event does not influence the occurrence or non-occurrence of theother.

Example: When a coin is tossed twice, the event of getting Tail(T) in the first toss and the event of getting Tail(T) in the second toss are independent events. This is because the occurrence of getting Tail(T) in any toss does not influence the occurrence of getting Tail(T) in the other toss. Exhaustive Event is the total number of all possible outcomes of an experiment.

Examples

When a coin is tossed, we get either Head or Tail. Hence there are 2exhaustive events.

When two coins are tossed, the possible outcomes are (H, H), (H, T), (T, H), (T, T). Hence there are $4 (=2^2)$ exhaustive events.

When a dice is thrown, we get 1 or 2 or 3 or 4 or 5 or 6. Hence there are 6exhaustive events.

Let A and B are two events with sample space S. Then

A U B is the event that either A or B or Both occur. (i.e., at least one of A or B occurs) $A \cap B$ is the event that both A and B occur Let E be an event and S be the sample space. Then probability of the event E can be defined as P(E)=n(E)/n(S)where P(E) = Probability of the event E, n(E) = number of ways in which the event can occur and n(S)= Total number of outcomes possible P(S) = 1 $0 \le P(E) \le 1$ $P(\phi) = 0$ Addition theorem Let A and B be two events associated with a random experiment. Then $P(A \cup B) = P(A) + P(B) - P(A \cap B)$ If A and B are mutually exclusive events, then $P(A \cup B) = P(A) + P(B)$ because for mutually exclusive events, $P(A \cap B)$ = 0If A and B are two independents events, then $P(A \cap B) = P(A).P(B)$ Let A be any event and A be its complementary event (i.e., A is the event that A does not occur). Then $P(A^-) = 1 - P(A)$ Let E be an event associated with a random experiment. Let xx outcomes are favourable to E and y outcomes are not favourable to E, then Odds in favour of E are x:y, i.e., x/y and Odds against E are y:x, i.e., y/x $P(E) = x/x+y P(E^{-}) = y/x+y$ **Class Practice Problems** 1. A bag contains 5 red balls and 7 blue balls. Two balls are drawn at random without replacement, and then find the probability of that one is red and other is blue. a) 33/65 b) 35/66 c) 37/66 d) 41/65 2. A bag contains 3 red balls and 8 blacksball and another bag contains 5 red balls and 7 blacks balls, one ball is drawn at random from either of the bag, find the probability that the ball is red. a) 93/264 b) 95/264 c) 91/264 d) 97/264 3. 12 persons are seated at a circulartable. Find the probability that 3 particular persons always seated together. a) 9/55 b) 7/55 c) 4/55 4. P and Q are two friends standing in a circular arrangement with 10 more people. Find the probability that exactly 3 persons are seated between P and Q. a) 5/11 b) 4/11 c) 2/11 d) 3/11 5. A basket contains 5 black and 8 yellow balls. Four balls are drawn at random and not replaced. What is the probability that they are of different colors alternatively. a) 56/429 b) 57/429 c) 61/429 d) 68/429

Direction(Q6 – Q8):			
6. A bag contains 6 red balls	and 8 green balls.	Two balls are drawn at	t random one after one
with replacement. 6. What is the	e probability that Bot	h the balls are green

9. A bag contains 6 red balls and 8 green balls. 2	2 balls are drawn at ra	indomone by one. Find
the probability that both the balls are green a) 16/49 b) 25/49	c) 12/49	d) 21/49
10. A card from a pack of 52 cards is lost. From the		,
drawn and are found to be both hearts. Find the Pro		
A. 12/50 B. 8/50	C. 11/50	D. 9/50
11. There are four hotels in a town. If 3 men che	eck into the hotels in a	a day then what is the
probability		
that each checks into a different hotel? A. 6/7 B. 1/8	C. 3/8	D E/0
A. 6/7 B. 1/8 12. Two teams Arrogant and Overconfident are page		D. 5/9
that team Arrogant will be champion is 5 to 3, and		
champion is 1 to 4. What are the odds that either Ar		
champion?	J	
A. 3 to 2 B. 5 to 2	C. 6 to 1	D. 33 to 7
13. A box contains 100 balls, numbered from 1 to		
with replacement from the box, what is the probab balls selected from the box will be odd?	ility that the sum of the	e three numbers on the
A. 1/2 B. 3/4	C. 3/8	D. 1/8
14. A bag contains 3 white balls and 2 black balls. A		
A bag and a ball are picked random. The probabilit		
A. 7/11 B. 7/30	C. 5/11	D. 7/15
15. I forgot the last digit of a 7-digit telephone numl		
correctly dialling the first four, then what is the char		
A. 1/1001 B. 1/1000 16. In his wardrobe, Dexter has three trousers. On	C. 1/999	D. 1/990
third brown. In his wardrobe, he also has four shir		
white. He opens his wardrobe in the dark and pic		
examining the colour. What is the likelihood that ne		•
A. 1/12 B. 1/2	C. 1/4	D. 1/6
17. A man can hit a target once in 4 shots. If he fires	s 4 shots in succession	n, what is the probability
that he will hit his target? A. 175/256 B. 1/256	C. 81/256	D. 1
18. The letters B, G,I,N and R are rearranged to follow		
A. 1/120 B. 1/54	C. 1/24	D. 1/76
19. Abhishek has 9 pairs of dark blue socks and 9		le keeps them all in the
same bag. If he picks out three socks at random,	then what is the proba	ability that he will get a
matching pair?	0 90 90 480	D. N
	C. ⁹ C ₃ x ⁹ C ₁ / ¹⁸ C ₃	D. None of these
20. Four boys and three girls stand in queue for an alternate positions is:	interview. The probab	ility that they stand in
A. 1/17 B. 1/34	C. 1/35	D. 1/68
Competition	<u>ı Level</u>	
1. In how many ways can letters the word ATTIT	UDE be rearranged s	uch that no two Ts are
adjacent to each other?	0 4 400	0
 a. 6720 b. 2400 c. 432 2. 2a + 5b = 103. How many pairs of positive integ 		
a. 7 b. 9 c. 14	d. 15	o odon mara / b.
3. I roll a die four times. In how many outcomes d	o we have two throws	have the same number
and the other two something different?	d 350	

4.	In how many ways can be select 5 cards from a card pack such that all 4 suits appear?
	a. 52728 b. 405646 c. 685464 d. 4056
5.	Find all 3-digit numbers such that sum of their digits is a whole number less than 5?
	a. 18 b. 20 c. 19 d. 17
6.	Of 22 points on a plane, 8 are on a straight line, 7 are on another straight line and 10 are on
	a third straight line. How many triangles can be drawn by connecting some three points from
	these 22?
	a. 22C3 b. 22C3 - (8C3+ 7C3 +10C3)
	c. 22C3 + (8C3+ 7C3 +10C3) d. 8C3+ 7C3 +10C3
7	The number of solutions (x, y, z) to the equation $x - y - z = 25$, where x, y, and z are positive
٠.	integers such that $x \le 40$, $y \le 12$, and $z \le 12$ is
	a. 101 b. 99 c. 87 d. 105
0	
ο.	In how many ways can 7 identical erasers be distributed among 4 kids in such a way that
	each kid gets at least one eraser but nobody gets more than 3 erasers?
_	a. 16 b. 20 c. 14 d. 15
9.	How many signposts can be made using 6 different coloured symbols when any number of
	them can be posted at a time?
	a. 1988 b. 1976 c. 1966 d. 1956
10.	. How many 3-digit numbers greater than 500 contain the digit 9 appearing at least once?
	a. 191 b. 176 c. 153 d. 189
11.	. In how many ways can 6 boys be allotted into 5 rooms such that no room is empty and all 6
	boys are accommodated?
	a. 6 * 5! Ways b. 7 * 5! Ways c. 3 * 3! Ways d. 15 * 5! Ways
12.	. What is sum of all rearrangements of the 4-digit number 3214?
	a. 66660 b. 55554 c. 60048 d. 65024
13.	How many numbers of up to 5 digits can be created using the digits 1, 2, 3 and 5 each at least
	once such that they are a multiple of 15?
	a. 24 b. 18 c. 15 d. 12
14	There are 6 periods in each working day of a school. In how many ways can one organize 5
	subjects such that each subject is allowed at least one period?
	a.3200 b. 1800 c. 3600 d. none of these
15	How many 4-digit number can be formed with the digits 0, 1, 2, 3, 4, 5, 6 which are divisible
15.	by 5 and none of its digit is repeated?
4.0	a. 120 b. 100 c. 220 d. 320
10.	Find the no. of 3-digit numbers such that at least one of the digits is 6 (with repetitions)?
47	a. 252 b. 345 c. 648 d. 560
17.	In how many ways three numbers can be selected from the set of numbers 1,2,320 such
	that the selected numbers are in ascending order?
4.0	a. 7C3 b. 20C3 c. 20C3 / 3! d. 1240
18.	In how many ways 3 playing cards can be selected from a card of 52 cards such that there is
	at least face card?
	a. 52C3 b. 52C3 – 36C3 c. 52C3 – 40 C3 d. None
	Find the sum of all numbers that can be formed using all the digits 1, 2, 8, 9 and 5 without
rep	petition.
	a. 5555500 b. 666600 c. 4444400 d. 6666600
20.	. In how many ways can 6 girls and 6 boys sit around a circular table so that no two boys sit
tog	ether?
_	
	a. 5! *5! b. 6! *6! c. 5! *6! d. 11!
21.	A and B take part in a duel. A can strike with an accuracy of 0.6. B can strike with an accuracy
21.	
21.	A and B take part in a duel. A can strike with an accuracy of 0.6. B can strike with an accuracy
21.	A and B take part in a duel. A can strike with an accuracy of 0.6. B can strike with an accuracy of 0.8. A has the first shot, post which they strike alternately. What is the probability that A
	A and B take part in a duel. A can strike with an accuracy of 0.6. B can strike with an accuracy of 0.8. A has the first shot, post which they strike alternately. What is the probability that A wins the duel? a. 7/10 b. 15/23 c. 2/3 d. 11/17
	A and B take part in a duel. A can strike with an accuracy of 0.6. B can strike with an accuracy of 0.8. A has the first shot, post which they strike alternately. What is the probability that A wins the duel?

23. N is a 3-digit number that is a multiple of 7; what is the probability that it will be a multiple of
5? a. 1/5 b. 11/54 c. 13/64 d. 13/66
24. A bag contains 4 red and 3 black balls. A second bag contains 2 red and 3 black balls. One
bag is selected at random. If from the selected bag one ball is drawn, then what is the
probability that the ball drawn is red?
a. 39/70 b. 41/70 c. 29/70 d. 17/35
25. A coin of radius 3 cm is randomly dropped on a square floor full of square shaped tiles of side
10 cm each. What is the probability that the coin will land completely within a tile? In other
words, the coin should not cross the edge of any tile.
a. 0.91 b. 0.5 c. 0.49 d. 0.16
26. A bag contains 4 blue, 5 white and 6 green balls. Two balls are drawn at random. What is the
probability that one ball is white?
a. 10/21 b. ½ c. ¾ d. 2/35
27. A card from a pack of 52 cards is lost. From the remaining cards of the pack, two cards are
drawn and are found to be both hearts. Find the probability of the lost card being a heart?
a. 12/50 b. 8/50 c. 11/50 d. 9/50
28. A bag contains 5 red and 7 white balls. Four balls are drawn out one by one and not replaced.
What is the probability that they are alternatively of different colors?
a. 7/99 b. 11/99 c. 14/99 d. 19/99
29. A bag contains 3 red balls and 8 blacks' ball and another bag contains 5 red balls and 7
blacks' balls, one ball is drawn at random from either of the bag, find the probability that the
ball is red.
a. 93/264 b. 95/264 c. 91/264 d. 97/264
30. An examination consists of two papers, Paper1 and 2. The probability of failing in Paper1 is
0.3 and that in paper 2 is 0.2. Given that a student has failed in paper2, the probability of failing
in paper 1 is 0.6. the probability of failing in both the papers is?
a. 0.5 b. 0.18 c. 0.12 d. 0.06
31. If eight unbiased coins are tossed together, then the probability that the number of heads
exceeds the number of tails is a. $31/128$ b. $\frac{1}{2}$ c. $93/256$ d. $57/256$
32. If a number is selected randomly from the natural number 1 to 30. The probability that the
number is divisible by either 4 or 7 is
a. 2/5 b. 7/15 c. 11/30 d. 1/3
33. A and B pick a card at random from a well shuffled pack of cards, one after the other replacing
it every time till one of them gets a spade. The person who picks a spade is declared the
winner. If A begins the game, then the probability that B wins the game is
a. 5/9 b. 4/9 c. 3/7 d. 4/7
34. One hundred identical coins each with probability 'p' showing up heads and tossed If 0 <p<1< td=""></p<1<>
and the probability of heads showing on 50 coins is equal to that of heads on 51 coins, then
the value of p is:
a. ½ b. 49/101 c. 50/101 d. 51/101
35. I forgot the last digit of a 7-digit telephone number. If 1 randomly dials the final 3 digits after
correctly dialing the first four, then what is the chance of dialing the correct number?
a. 1/1001 b. 1/1000 c. 1/999 d. 1/990
36. The probability that a man can hit a target is 3/4. He tries 5 times. The probability that he will
hit the target at least three times is:
a. 291/364 b. 371/464 c. 471/502 d. 459/512
37. A 5-digit number is formed by the digits 1,2,3,4 and 5 without repetition. What is the probability
that the number formed is a multiple of 4?
a. ½ b. 1/5 c. 2/5 d. 1/120
38. A box contains 10 balls numbered 1 through 10. Anuj, Anisha and Amit pick a ball each, one
atter the other each time reniacing the hall what is the brondhilly that while block a hall
after the other each time replacing the ball. What is the probability that Anuj picks a ball
numbered less than that picked by Anisha, who in turns picks lesser number ball than Amit? a. 3/25 b. 1/6 c. 4/25 d. 81/400

39. A biased die has a probability of 1/4 of showing a 5, while the probability of any of 1, 2, 3, 4, or 6 turning up is the same. If three such dice are rolled, what is the probability of getting a sum of at least 14 without getting a 6 on any die?

a. 5/24

- b. 9/160
- c. 1/30
- d. 7/160
- 40. A box contains 20 electric bulbs, out of which 4 are defective. Two bulbs are chosen at random from this box. The probability that at least one of these is defective is:

a. 4/19

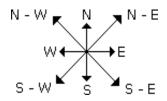

- b. 7/19
- c. 12/19
- d. 21/95

DIRECTION SENSE

1. There are four main directions - East, West, North and South as shown below:

2. There are four cardinal directions - North-East (N-E), North-West (N-W), South-East (S-E), and South-West(S-W) as shown below:

- 3. At the time of sunrise if a man stands facing the east, his shadow will be towards west.
- 4. At the time of sunset the shadow of an object is always in the east.
- 5. If a man stands facing the North, at the time of sunrise his shadow will be towards his left and at the time of sunset it will be towards his right.
- 6. At 12:00 noon, the rays of the sun are vertically downward hence there will be no shadow.
- 7. Left Right Movement:-
 - 4 A person facing north, on taking left will face towards west and on taking the right turn towards east.
 - ♣ A person facing west, on taking left will face towards south and on taking right turn towards north.
- ♣ A person facing east, on taking left will face towards north and on taking the right turn towards south.
- ♣ A person facing south, on taking left will face towards east and on taking the right turn towards west
 - . . Whenever a person moves to his left side, he will move towards anti- clockwise direction.
 - ♣ Whenever a person moves to his right side, he will move towards clockwise direction.
- 8. When a question says moved towards left or right side, we assume that the movement is at an angle of 90 degrees.

Class Practice Problems

- 1.If A is to the south of B and C is to the east of B, in what direction is A with respect to C?
 - A. South-East
- B. North
- C. None of These
- D. South-West
- 2.A is 40 m south-west of B. C is 40 m south-east of B. Then C is in which direction of A?
 - A. East

- B. West
- C. South

D. North

3.There are four towns P, 0	Q. R and T. Q is to the s	south-west of P. R is to	the east of Q and
south-east of P, and T is to			
A. South-East	B. North	C. North-East	D. West
4. A, B, C and D playing of			
towards West, then who fa		inoro. D lacoo towardo	1101111. 11 71 14000

2 km. What is Arjun's		•	
a) North	b) South	c) East	d) West
9. Shaan is doing an	exercise with his legs	s up and head do	own. He is facing west. In which
direction, will his left h	and be?		
a) North	b) South	c) East	d) West
10. Narendra runs 5 k	m in the east direction	n from his home.	He then takes a left and runs 15
km. He then takes a ri	ght turn and runs 10 k	km. He then took	a turn towards the south and ran
15 km. What is the dis	stance between his ho	ome and his curre	ent location?
a) 10 km	b) 15 km	c) 20 km	d) 30 km
11. Anitha and Kathir	are two friends study	ing in the XYZ Ar	ts College. Anitha starts walking
from her house in nor	th direction. After wall	king 120m, she re	eached the Axis Bank. Then she
turns and walks 40m	in north-east direction	n. Then she turns	s 90 degree clock wise direction
and walks 30m to re-	ach Kathir's house w	hich is in the ea	st of the Axis Bank. Then from
Kathir's house both of	them walk 130m in s	outh-east direction	on to reach their college which is
east of Anitha's house	e. What is the shortes	t distance betwee	en Anitha's House and XYZ Arts
College?			
a) 100m	b) 110m	c) 120m	d) 130m
12. Ankush walked 50) m towards north the	n turned left and	walked 68 m. He then turned to
south and walked 22	m then he took a left	turn and walked	44 m. After that he turned right
and walked 18 m and	finally, he turned lef	t to and walked	48 m. What is the total distance
travelled by Ankush ir	n south direction durin	g the entire jourr	ney?
a) 22 m	b) 36 m	c) 40 m	d) 48 m
13. The post office is	to the east of the sch	ool while my hou	use is to the south of the school.
The market is to the n	orth of the post office	. If the distance of	of the market from the post office
is equal to the distan	ce of my house from	the school, in w	hich direction is the market with
respect to my school?)		
a) South-west	b) North-east	c) North	d) East
14. Rasik walks 20 m	n North. Then he turn	s right and walks	s 30 m. Then he turns right and
walks 35 m. Then he	turns left and walks 1	5 m. Then he ag	ain turns left and walks 15 m. In
which direction and he	ow many metres away	y is he from his o	riginal position?
a) 15 metres West		b) 30 metres	East
c) 30 metres West		d) 45 metres	East
15. I am facing east. I	turn 100° in the clock	wise direction ar	nd then 145° in the anticlockwise
diretion. Which directi	on am I facing now?		
a) North	b) North-east	c) East	d) South-west
16. Siva Reddy walke	d 2 km west of his ho	use and then turr	ned south covering 4 km. Finally,
•			far is he from his initial position?
A. 10 km	B. 9 km	C. 2 km	D. 4 km
17. A man went 10 kr	ns towads South. The	en turned East an	d covered 10 kms and turned to
			10 kms to reach the destination.
How far is he from his			

A. 18.8 km	B. 28.28 km	C. 16 km	D. 20 km	
18. Rajesh's school	ol bus is facing North	when reaches his sch	ool. After starting from Rajesh's	s
house, it turning tw	vice right and then le	ft before reaching the	school. What direction the bus	s
facing when it left t	the bus stop in front of	of Rajesh's house?		
A. East	B. North	C. South	D. West	
19. Anil wants to g	o the university. He	starts from his house	which is in the East and come:	S
to a crossing. The	road to his left ends	in a theatre, straight	ahead is the hospital. In which	h
direction is the Uni	versity?			
A. East	B. North	C. South	D. West	
20. If South-East	becomes North, No	rth-East becomes We	est and so on, what will Wes	st
become?				
A. North	B. East	C. South-East	D. North-West	

BLOOD RELATION

COMMON RELATIONS-

How To Solve Questions:

2.

Read the Data Quickly to get the Feel of the Question

• Start with last Information and proceed backwards

 It is advicable to begin with a sentence that gives information about Parent-Child Relationship in Complex Question.

,	y. In this family there are three married couples and three
,	is daughter-in-law of Q, who is mother of O. U is father-in-
-	is not unmarried. S is brother-in-law of U. R has only one
daughter. Who among the following is	grandson of R?
a) O b) T	c) V d) U
10) Introducing a boy, a girl says, "He	e is the son of the only sister of my mother's brother." How
is the boy related to that girl?	· · · · · ·
a) Father-in-law	b) Brother
c) Cousin	d) Niece

11) Study the following information carefully and answer the questions which follow-
'P – Q' means 'P is father of Q'
'P ÷ Q' means 'P is sister of Q'
'P × Q' means 'P is mother of Q'
'P + Q' means 'P is brother of Q'
Which of the following means 'A is nephew of B'?
a) A + C – B × K
b) B ÷ H – A + D
c) $B \div G - A \div R$
d) B + T \times A \div E
12) There are eight members in the family having three generations. There are only three married
couples. A is the mother of D. G is son in law of B. H is the nephew of D. C has only one son. F
is the granddaughter of C. E is the mother of F. D is unmarried. How C is related to D?
a) Father b) Mother
c) Son d) Son in law
13) A boy introduced a girl as the daughter of the son of the mother of his aunt. The girl is boy's
a) Sister b) Cousin sister
c) Sister-in-law d) Aunt
14) Sunil is the son of Kesav. Simran, Kesav's sister, has a son Maruti and daughter Sita. Prem
is the maternal uncle of Maruti. How is Sunil related to Maruti?
a) Nephew b) Cousin
c) Uncle d) Brother
15) A man showed a boy next to him and said – "He is the son of my wife's sister-in-law, but I am the only child of my parents." How is my son related to him?
a) Nephew b) Cousin
c) Brother d) Uncle
16. 1. Rohan walked 50 m towards East, took a right turn and walked 30 m. Which direction is he
now from his starting position?
(a) South-West (b) North-East (c) North-West (d) South-East (e) None of these
17. Pranav started walking straight facing West . After walking some distance he took a left turn
and again after walking some distance he took a left turn. Which direction is he facing now?
(a) West (b) North (c) East (d) South (e)Cannot be determined
18. Nishtha lives to the North of Nihar who lives to the West of Harry. Arun who lives to the South of
Nishtha has house in which direction with respect to Harry?
(a) North-West (b) North (c)South-West (d) Cannot be determined (e)None of these
19. R is to the West of P.T is to the East of S.P is to the North of S. T is in which direction with
reference to R?
(a) West (b) East (c) North (d) South (e) None of these
20. There are four towns P,Q,R & T. Q is to the South-West of P, R is to the East of Q and South-
East of P, and T is to the North of R in line with QP. In which direction of P is T located?
a) South-East b) North c)North-East d) East e) None of these.
